SKU: 9780134453736-TEST-BANK

***Cost Accounting: A Managerial Emphasis - Cdn. Ed., 8e (Horngren)***  
**Chapter 2 An Introduction to Cost Terms and Purposes**

1 Identify and distinguish between two manufacturing cost classification systems: direct and indirect, prime and conversion.

1) "Cost" is defined by accountants as a resource sacrificed or foregone to achieve a specific objective.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

2) Costs of Sales is another way of phrasing Cost of Goods Sold.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

3) An actual cost is a predicted cost.

Answer: FALSE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

4) Nearly all accounting systems accumulate forecasted costs.

Answer: FALSE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

5) A cost object is anything for which a separate measurement of costs is desired.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

6) Indirect costs cannot be economically traced directly to the cost objective.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

7) Delivery charges are typically considered to be an indirect cost because it cannot be traced to each customer.

Answer: FALSE

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

8) A cost is classified as a direct or indirect cost based on the applicable cost object.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

9) Cost tracing assigns indirect costs to the chosen cost object.

Answer: FALSE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

10) Factors affecting direct/indirect cost classifications are the materiality of the cost in question, the information-gathering technology used, and the operations.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

11) Rent for the building that contains the manufacturing and engineering departments can all be charged as manufacturing overhead costs.

Answer: FALSE

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

12) The plant supervisor's salary is a direct labour cost.

Answer: FALSE

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

13) Conversion costs include all direct manufacturing costs.

Answer: FALSE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

14) Prime costs consist of direct and indirect manufacturing labour.

Answer: FALSE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

15) Conversion costs are all manufacturing costs other than direct materials.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

16) Products, services, departments, and customers may be cost objects.

Answer: TRUE

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

17) Costs are accounted for in two basic stages: assignment followed by accumulation.

Answer: FALSE

Explanation: Costs are accounted for in two basic stages: accumulation followed by assignment.

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

18) A cost object is always either a product or a service.

Answer: FALSE

Explanation: A cost object could be anything management wishes to determine the cost of, for example, a department.

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

19) Assigning direct costs poses more problems than assigning indirect costs.

Answer: FALSE

Explanation: Tracing direct costs is quite straightforward, whereas assigning indirect costs to a number of different cost objects can be very challenging.

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

20) A department could be considered a cost object.

Answer: TRUE

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

21) *Cost assignment* is a term that refers solely to allocating indirect costs among diverse cost objects.

Answer: FALSE

Explanation: *Cost assignment* is a general term that encompasses both (1) tracing direct costs to a distinct cost object and (2) allocating indirect costs among diverse cost objects.

Diff: 2 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

22) Materiality refers to the significance of the cost in question.

Answer: TRUE

Diff: 1 Type: TF

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

23) Anything for which a separate measurement of costs is desired is known as

A) a cost item.

B) a cost object.

C) a fixed cost item.

D) a variable cost object.

E) a cost driver.

Answer: B

Diff: 1 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

24) Which of the following is a cost object?

A) direct materials

B) customers

C) conversion costs

D) cost assignments

E) indirect labour

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

25) Which of the following is an indirect production cost?

- A) materials placed into production
- B) calibrating factory equipment
- C) labour placed into production
- D) cost of shipping a product to the customer
- E) advertising

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

26) Actual costs are defined as

- A) costs incurred.
- B) direct costs.
- C) indirect costs.
- D) predicted costs.
- E) sunk costs.

Answer: A

Diff: 1 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

27) Whether a company traces costs directly to an output unit or not depends upon

- A) the materiality of the contribution a cost makes to the total cost per output unit.
- B) the amount of similar costs in the cost assignment.
- C) the effect of cost tracing on overhead.
- D) the employment of cost management.
- E) the amount of customer satisfaction.

Answer: A

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

28) Which one of the following items is typically an example of an indirect cost of a cost object?

- A) courier charges for shipment delivery
- B) manufacturing plant electricity
- C) direct manufacturing labour
- D) wood used for furniture manufacture
- E) refundable sales tax on direct materials

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

29) Prime costs can include

- A) conversion costs.
- B) direct material costs.
- C) indirect manufacturing labour.
- D) machine set up costs.
- E) advertizing costs.

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

30) Which one of the following examples could be classified as a direct cost?

- A) The costs of an entire factory's electricity related to a product; the product line is the cost object.
- B) The printing costs incurred for payroll cheque processing; the payroll cheque processing is the cost object.
- C) The salary of a maintenance supervisor in the manufacturing plant; Product A is the cost object.
- D) The costs incurred for electricity in the office; the accounting office is the cost object.
- E) The cost of advertising the products.

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

31) The determination of a cost as being either direct or indirect depends upon

- A) the accounting system.
- B) the allocation system.
- C) the cost tracing system.
- D) only the cost object chosen to determine its individual costs.
- E) the choice of the cost object, and the materiality of the cost in question.

Answer: E

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

32) Cost assignment is

- A) always arbitrary.
- B) linking actual costs to cost objects.
- C) the same as cost accumulation.
- D) finding the difference between budgeted and actual costs.
- E) the same as cost conversion.

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

33) Wages paid to machine operators on an assembly line are an example of which type of cost?

- A) direct manufacturing labour costs
- B) direct manufacturing overhead costs
- C) direct materials costs
- D) indirect manufacturing overhead costs
- E) indirect material costs

Answer: A

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

34) Which of the following is TRUE concerning prime costs?

- A) Prime costs are direct manufacturing costs.
- B) They include indirect manufacturing labour.
- C) They equal the sum of direct manufacturing costs plus conversion costs.
- D) They equal the sum of fixed manufacturing costs plus conversion costs.
- E) They are indirect manufacturing costs.

Answer: A

Diff: 1 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

35) Cost tracing is

- A) the assignment of direct costs to the chosen cost object.
- B) a function of cost allocation.
- C) the process of tracking both direct and indirect costs associated with a cost object.
- D) the process of determining the actual cost of the cost object.
- E) the assignment of both direct and indirect costs associated with a cost object.

Answer: A

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

36) Cost allocation is

- A) the process of tracking both direct and indirect costs associated to a cost object.
- B) the process of determining the actual cost of the cost object.
- C) the assignment of indirect costs to the chosen cost object.
- D) a function of cost tracing.
- E) the assignment of direct costs to the chosen cost object.

Answer: C

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

- 37) Classifying a cost as either direct or indirect depends upon
- A) the behaviour of the cost in response to volume changes.
  - B) whether the cost is expensed in the period in which it is incurred.
  - C) whether the cost can be traced to the cost object.
  - D) whether an expenditure is avoidable or not in the future.
  - E) the inventory classification system.

Answer: C

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

- 38) A manufacturing plant produces two product lines: football equipment and hockey equipment. Direct costs for the football equipment line are the

- A) beverages provided daily in the plant break room.
- B) monthly lease payments for a specialized piece of equipment needed to manufacture the football helmet.
- C) salaries of the clerical staff that work in the company administrative offices.
- D) utilities paid for the manufacturing plant.
- E) advertising costs.

Answer: B

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

- 39) A manufacturing plant produces two product lines: football equipment and hockey equipment. An indirect cost for the hockey equipment line is the

- A) material used to make the hockey sticks.
- B) labour to bind the shaft to the blade of the hockey stick.
- C) shift supervisor for the hockey line.
- D) plant supervisor.
- E) salesperson travelling expenses.

Answer: D

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

40) Factors affecting direct/indirect cost classification include all of the following EXCEPT the

- A) cost assignment method.
- B) materiality of the cost in question.
- C) selection of the cost object.
- D) available information-gathering technology.
- E) design of operations.

Answer: A

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-1

41) Manufacturing overhead includes

- A) corporate insurance cost.
- B) the executive officers' salaries.
- C) marketing costs.
- D) supplies used in the human resources department.
- E) plant utilities.

Answer: E

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

42) What is the meaning of the term "cost object"? Give an example of a cost object that would be used in a manufacturing company, a merchandising company, and a service sector company?

Answer: A cost object is anything for which a measurement of costs is desired. An example of a cost object for a manufacturing company might be the cost of manufacturing a particular product. An example of a cost object for a merchandising company might be a particular department of a retail store. An example of a cost object for a service sector company might be the cost to serve or supply a particular customer.

Diff: 2 Type: ES

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

43) What are the differences between direct costs and indirect costs? Give an example of each.

Answer: *Direct* costs are costs that can be traced easily and economically to the product manufactured or the service rendered. Examples of direct costs include direct materials and direct manufacturing labour used in a product. *Indirect* costs cannot be easily identified in a cost efficient manner (economically) with individual products or services rendered, and are usually assigned using allocation formulas. In a plant that manufactures multiple products, examples of indirect costs include the plant supervisor's salary and the cost of machines used to produce more than one type of product.

Diff: 2 Type: ES

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-1

Sheen Manufacturing has four manufacturing cost pools and many types of costs, some of which are e listed below. Match the type of cost with the most appropriate cost pool or as a period cost.

- A) Period cost
- B) Cost pool - indirect factory operating costs
- C) Cost pool - indirect factory labour
- D) Cost pool - direct factory labour

44) amortization on buildings and equipment

Diff: 1 Type: MA

57) Office Supply Company manufactures office furniture. Recently the company decided to develop a formal cost accounting system. The company is currently converting all costs into classifications as related to its manufacturing processes.

Required:

For the following items, label each as being appropriate for

- direct cost tracing of the finished furniture,
- indirect cost allocation of an indirect manufacturing cost to the finished furniture, or
- as a nonmanufacturing item.

| Item                           | Direct Cost<br>Tracing | Indirect Cost<br>Allocation | Nonmanu-<br>facturing |
|--------------------------------|------------------------|-----------------------------|-----------------------|
| Carpenter wages                | _____                  | _____                       | _____                 |
| Amortization - office building | _____                  | _____                       | _____                 |
| Glue for assembly              | _____                  | _____                       | _____                 |
| Lathe department supervisor    | _____                  | _____                       | _____                 |
| Lathe amortization             | _____                  | _____                       | _____                 |
| Lathe maintenance              | _____                  | _____                       | _____                 |
| Lathe operator wages           | _____                  | _____                       | _____                 |
| Lumber                         | _____                  | _____                       | _____                 |
| Sales staff wages              | _____                  | _____                       | _____                 |
| Metal brackets for drawers     | _____                  | _____                       | _____                 |
| Washroom supplies              | _____                  | _____                       | _____                 |

Answer:

| Item                           | Direct Cost<br>Tracing | Indirect Cost<br>Allocation | Nonmanu-<br>facturing |
|--------------------------------|------------------------|-----------------------------|-----------------------|

*Use the information below to answer the following question(s).*

Macadamia Co. produced and sold 40,000 units last year. **Per unit** revenue and costs were as follows:

|                                   |         |          |
|-----------------------------------|---------|----------|
| Revenue                           |         | \$100.00 |
| Cost of Goods Sold:               |         |          |
| Direct Materials                  | \$15.00 |          |
| Direct Labour                     | 30.00   |          |
| Variable Manufacturing Overhead   | 20.00   |          |
| Fixed Manufacturing Overhead      | 10.00   |          |
| Total Cost of Goods Sold          |         | 75.00    |
| Gross Margin                      |         | \$25.00  |
| Selling and Administrative Costs: |         |          |
| Sales Commissions (10% of Sales)  | \$10.00 |          |
| Administrative Salaries           | 20.00   |          |
| Total Selling and Administrative  |         | 30.00    |
| Operating Income <Loss>           |         | <\$5.00> |

Fixed manufacturing overhead and administrative salaries are fixed costs. The per unit amounts are based on last year's production.

14) Calculate last year's operating income when the company produced and sold 40,000 units.

- A) \$0
- B) \$<200,000>
- C) \$<500,000>
- D) \$<800,000>
- E) \$<1,000,000>

Answer: B

Explanation:  $40,000 \times [100 - (15 + 30 + 20 + 10)] - [40,000 \times (20 + 10)] = \$<200,000>$

31) A new employee in the accounting department is having difficulty understanding two sets of accounting terms—variable and fixed costs as opposed to period and product costs. He understands that variable costs change during an accounting period while fixed costs do not. However, he explains that a period cost implies that it is for a period of time and is, therefore, also fixed. Does his assumption imply that all product costs are then variable?

Required:

As part of your responsibility to train new staff, explain the difference between these terms.

Answer: First, you should explain that all costs should be first classified as either variable or fixed. This concept deals with cost behaviour and not with what the costs are associated in the organization. Many decisions are made about costs because of the type of behaviour they exhibit.

Second, a cost can be assigned to "why you are in business" activities (product costs) of the organization or to "support" activities (period costs) of the organization. For a manufacturing firm period costs are all costs which have no direct relationship to the manufacturing process.

Period costs are always expenses during the accounting period while product costs are inventoriable because they can be assigned to the products being produced.

Skill: Understanding

Objective: LO 2-2

32) A manufacturing company contracts with the labour union to guarantee full employment for all employees with at least 10 years seniority. The Company expects to be working at capacity for the next 2 years (the life of the contract), so this was seen as a bargaining concession without any cost to the company. On average, an employee earns \$30 per hour, including benefits. The work force consists of 800 employees, with seniority ranging from 1 year to 18 years.

Required:

Analyze the direct labour cost in term of variable costs, fixed costs, and the relevant range.

Answer: Usually, we think of direct labour as a variable cost, since it increases in proportion to the increases in output. However in this case, the manufacturer has converted a portion of the direct labour cost into a fixed cost, since the union contract appears to require the company to pay full wages to all employees with at least 10 years seniority, regardless of the level of production. The direct labour costs in excess of this amount would still be a variable cost. The relevant range would be the number of employees with at least 10 years seniority, times the wage for a regular work week. This will be the case until the contract expires.

33) Describe a variable cost. Describe a fixed cost. Explain why the distinction between variable and fixed costs is important in cost accounting.

Answer: *Total variable* costs increase with increased production or sales volumes; *Unit variable* cost remains constant no matter the level of activity; all within the relevant range.

*Fixed* costs are not influenced by fluctuations in production or sales volumes. *Unit fixed* costs will decrease as activity level increases; within the relevant range.

Without the knowledge of cost behaviors, budgets and other forecasting tools will be inaccurate and unreliable. Understanding whether a cost behaves as a variable or a fixed cost is essential to estimating and planning for business success.

Diff: 2 Type: ES

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-2

34) Eichhorn Company's Process Engineering department has the responsibility of rearranging the individual work tasks for each assembly line worker, with the goal of utilizing each worker as much as possible. Currently, on average, each assembly line worker only has tasks that require 47 minutes per hour, and the plant manager wants this increased by at least 10 %. The company builds the Eichhorn Rocket Roadster, which is selling out of dealers' showrooms faster than the company's assembly plants can produce them. If production can't be increased, then sales will soon suffer.

Required:

Explain the effect on total costs of production, using the number of engineering changes (from Process Engineering) and at least two other cost drivers. Choose the cost driver that you think is most logical in the circumstances, and begin your answer with a brief explanation of a cost driver.

Answer: A cost driver is any factor that affects total costs. When a new engineering change has to be implemented, obviously there will be down time for staff to learn the new work processes, and for any physical changes required on the assembly line that may result in rearranging the workload tasks (such as material handling changes). These costs would have to be balanced against the expected savings by being able to utilize the production worker's time more efficiently. The costs of the engineer's time would not be relevant.

A second cost driver would be the units of production. As the workers time utilization becomes more efficient, production should increase, so total variable costs will increase. Total fixed costs will not increase assuming no problems with the relevant range. The direct manufacturing labour costs would increase in total, but as indicated above, we expect decreased variable direct manufacturing labour cost per unit.

Another possible cost driver is the number of setups. To the extent that the number of setups is increased by the engineering changes, then total costs will increase, and these costs would have to be considered when contemplating the engineering changes. In this situation, it appears that production must be increased, and that the plant manager is most concerned with achieving this through reducing the direct labour required per unit, rather than by reducing labour costs per unit. Therefore, the most likely cost driver in this situation would be the number of units produced.

35) Boone Hospital wants to determine, to the extent possible, the actual cost for each patient stay. It is a general health care facility with all basic services but does not perform specialized services such as organ transplants.

Required:

Complete the following table by

- Classifying each cost as a direct or indirect cost with respect to each patient.
- Classifying each item as fixed or variable with respect to the number of patient days (sum of days each patient was in hospital) the hospital incurs.

| Cost                  | Direct | Indirect | Fixed | Variable |
|-----------------------|--------|----------|-------|----------|
| Cleaning activities   |        |          |       |          |
| Electronic monitoring |        |          |       |          |
| Lab test charges      |        |          |       |          |
| Meals for patients    |        |          |       |          |
| Medicine              |        |          |       |          |
| Nurses' salaries      |        |          |       |          |
| Operating room usage  |        |          |       |          |
| Parking maintenance   |        |          |       |          |
| Security              |        |          |       |          |

Answer:

| Cost                  | Direct | Indirect | Fixed | Variable |
|-----------------------|--------|----------|-------|----------|
| Cleaning activities   |        | X        |       | X        |
| Electronic monitoring | X      |          |       | X        |
| Lab test charges      | X      |          |       | X        |

5) Wheel and Tire Manufacturing currently produces 1,000 tires per month. The following per unit data apply for sales to regular customers:

|                                 |             |
|---------------------------------|-------------|
| Direct materials                | \$20        |
| Direct manufacturing labour     | 3           |
| Variable manufacturing overhead | 6           |
| Fixed manufacturing overhead    | 10          |
| Total manufacturing costs       | <u>\$39</u> |

The plant has capacity for 3,000 tires and is considering expanding production to 2,000 tires. What is the total cost of producing 2,000 tires?

A) \$39,000

B) \$78,000

C) \$68,000

D) \$62,000

Answer: C

Explanation:  $[(\$20 + \$3 + \$6) \times 2,000 \text{ units}] + (\$10 \times 1,000 \text{ units}) = \$68,000$

8) Springfield Manufacturing produces electronic storage devices, and uses the following three-part classification for its manufacturing costs: direct materials, direct manufacturing labour, and indirect manufacturing costs. Total indirect manufacturing costs for January were \$300 million, and were allocated to each product on the basis of direct manufacturing labour costs of each line. Summary data for January for the most popular electronic storage device, the Big Bertha, was:

|                                     | <b>Big Bertha</b> |
|-------------------------------------|-------------------|
| Direct manufacturing material costs | \$9,000,000       |
| Direct manufacturing labour costs   | \$3,000,000       |
| Indirect manufacturing costs        | \$8,500,000       |
| Units produced                      | 40,000            |

Required:

- Compute the total manufacturing cost per unit for each product produced in January.
- Suppose production will be reduced to 30,000 units in February. If indirect manufacturing costs include fixed costs then explain if the total cost per unit be higher or lower than in January.

Answer:

- Unit costs for January were:

$$(\$9,000,000 + \$3,000,000 + \$8,500,000)/40,000 = \$512.50 \text{ per unit}$$

- Unit costs will be higher in February if only 30,000 units are to be produced. Since fewer units are expected to be produced in February, total fixed costs will be spread over fewer units. This will result in an increase in total cost per unit since variable costs per unit will most likely not change with the decreased production.

Objective: LO 2-3

9) Gimble Manufacturing Inc. makes vibration control springs for heating, ventilating, and air conditioning (HVAC) equipment. Materials cost \$52 per spring set, and the machinists are paid \$44 per hour. A machinist can produce four sets of springs per hour. Fixed manufacturing costs for springs are \$5,000 per period. Non-manufacturing spring set costs are fixed at \$11,000 per period. Each spring set sells for \$75 and Gimble sells on average 4,000 spring sets per period.

Required:

- Competition has entered the market and is selling spring sets for an introductory price of \$66. Can Gimble Manufacturing Inc. meet this price and still make a profit?
- How would your answer to requirement a. change if Gimble sells on average 8,000 spring sets per period.
- What should Gimble Manufacturing Inc.'s management do in the short-run and for the long-term if it appears that \$66 is going to be the new market price for the future.

Answer:

- No.

|                                  |            |                   |
|----------------------------------|------------|-------------------|
| Revenue (4,000 × \$66)           |            | \$ 264,000        |
| Cost of goods sold:              |            |                   |
| Materials (4,000 × \$52)         | \$ 208,000 |                   |
| Direct labour (4,000 × (\$44/4)) | 44,000     |                   |
| Fixed manufacturing costs        | 5,000      |                   |
| Cost of goods sold               |            | <u>257,000</u>    |
| Gross margin                     |            | \$ 7,000          |
| Fixed non-manufacturing costs    |            | <u>11,000</u>     |
| Net operating loss               |            | <u>\$ (4,000)</u> |

- Yes.

|                                  |            |                 |
|----------------------------------|------------|-----------------|
| Revenue (8,000 × \$66)           |            | \$ 528,000      |
| Cost of goods sold:              |            |                 |
| Materials (8,000 × \$52)         | \$ 416,000 |                 |
| Direct labour (8,000 × (\$44/4)) | 88,000     |                 |
| Fixed manufacturing costs        | 5,000      |                 |
| Cost of goods sold               |            | <u>509,000</u>  |
| Gross margin                     |            | \$19,000        |
| Fixed non-manufacturing costs    |            | <u>11,000</u>   |
| Net operating loss               |            | <u>\$ 8,000</u> |

- The spring sets have a unit contribution margin of \$3 (\$66 - \$52 - \$11) so meeting the price in the short-run will at least contribute to fixed costs. In the long-term the company will have to lower costs or differentiate its' product in such a way that it can command a higher price.

10) Things are not going well for the widget industry this year. The well-known cyclical nature of widget sales is in a downturn and your plant has been ordered to cut costs by its American parent corporation. The plant manager explains that he has shown the lead by negotiating a \$1.50 hourly wage decrease with the production workers, based on a formula that pegs a \$1.50 per hour wage increase/decrease to sales volume, and since sales are down this year, so are hourly wage costs. In the quarterly management meeting, the sales manager complained that sales could have been higher, but that somehow costs had increased, at least that's what the reports out of your office in management accounting, indicated. The Purchasing manager assured everyone that she was able to obtain raw materials at the same price as last year, and unfortunately, you as the management accountant, were not in attendance at the meeting. Your assistant, a new employee attended in your place, and promised at the meeting to redo the reports and find the errors. Your assistant has come to you as he cannot find any errors in the reports. Consequently, the plant manager wants you to redo the reports, find the error reports produced by your department for the last quarter and to explain to your boss, the plant manager, why average costs have increased.

Required:

Assuming there are no errors in the cost reports, explain to the plant manager how direct labour costs could be decreased and direct materials costs could be the same as last year, and yet the selling price cannot be lowered without sacrificing net income for the plant.

Answer: The key to the problem lies in recognizing the difference between variable and fixed costs, and understanding the implication that declining volume has on average costs. Part of the solution may be due to indirect materials, but one would assume this is a minor factor. The major factor is that there are fewer units of widgets to absorb the fixed costs. On a per widget basis, the plant is saving say, \$1.50 per hour in labour costs, but each widget has to absorb more of the fixed costs. If the \$1.50 per hour component is not a significant part of the cost, compared to the fixed cost per unit at that level of production, for example, if the direct labour per widget is only 6 minutes, then the savings in variable cost per widget is only \$0.15. This isn't much in savings when the fixed costs per unit have to increase. The next point is that setting the sales price perhaps should not consider actual fixed cost burden, but the plant could consider using a budgeted amount, and lower the sales price somewhat in hopes that this would increase sales.

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-3

11) The vice president of production has just completed the January meeting with all production department heads. Everyone is upset that the production variances for the month were unfavourable. They do not understand why everything was unfavourable. January is typically the company's lowest production month of the year.

The company uses annual average unit costs for production evaluation purposes. The average costs are based on the prior year's actual performance with adjustments for any predicted changes in the coming year. Both production and economic items are considered in setting the averages for each new year.

Required:

Explain the problems with using average costs in evaluating production.

Answer: One of the problems with average unit costs is that actual costs may never be average. The probable shortcoming with the situation presented is that the costs included a fixed cost element and with the production low the fixed costs were averaged using a denominator that was smaller than the year's average which caused the unit averages to increase.

Use the information below to answer the following question(s).

Consider the following data of the Vancouver Company for the year 2019:

|                               |          |                             |           |
|-------------------------------|----------|-----------------------------|-----------|
| Sandpaper-Plant               | \$10,000 | Leasing costs - plant       | \$120,000 |
| Materials handling-Plant      | 100,000  | Amortization- equip.        | 70,000    |
| Coolants-Plant                | 7,000    | Property taxes - equip.     | 10,000    |
| Indirect manufacturing labour | 86,000   | Fire insurance - equip.     | 5,000     |
| Direct manufacturing labour   | 680,000  | Direct material purchases   | 980,000   |
| Direct materials, 1/1/2019    | 120,000  | Direct materials 12/31/2019 | 86,000    |
| Finished goods, 1/1/2019      | 210,000  | Sales                       | 4,000,000 |
| Finished goods, 12/31/2019    | 400,000  | Sales commissions           | 200,000   |
| WIP, 1/1/2019                 | 30,000   | Sales salaries              | 180,000   |
| WIP, 12/31/2019               | 20,000   | Advertising costs           | 150,000   |
| Administration costs          | 250,000  |                             |           |

12) What is the unit cost for the direct materials for 2019 assuming direct materials costs are for the production of 1,014,000 units?

- A) \$0.80
- B) \$0.95
- C) \$1.00
- D) \$1.08
- E) \$1.11

Answer: C

Explanation:  $(\$120,000 + \$980,000 - \$86,000) / 1,014,000 \text{ units} = \$1.00$

Use the information below to answer the following question(s).

The following information pertains to Payton's Shoe Manufacturing:

|                     |             |
|---------------------|-------------|
| Manufacturing costs | \$1,000,000 |
| Shoes manufactured  | 100,000     |
| Beginning inventory | 0 pairs     |

99,500 pairs of shoes are sold during the year for \$18.

16) What is Payton's manufacturing cost per pair of shoes?

- A) \$10.00
- B) \$10.05
- C) \$100.00
- D) \$18.00
- E) \$9.95

Answer: A

Explanation:  $\$1,000,000 / 100,000 = \$10.00$

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Applying

Objective: LO 2-4

34) What is the amount of finished goods inventory?

- A) \$2,000,000
- B) \$12,000
- C) \$225,000
- D) \$127,659
- E) \$120,000

Answer: E

Explanation:  $(50,000 - 47,000) \times (\$2,000,000 / \$50,000) = \$120,000$

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Applying

*Answer the following question(s) using the information below.*

The following information pertains to Alleigh's Mannequins:

|                     |                                     |
|---------------------|-------------------------------------|
| Manufacturing costs | \$1,500,000                         |
| Units manufactured  | 30,000                              |
| Units sold          | 29,500 units sold for \$85 per unit |
| Beginning inventory | 0 units                             |

35) What is the average manufacturing cost per unit?

- A) \$50.00
- B) \$50.85
- C) \$17.65
- D) \$85.00
- E) \$49.50

Answer: A

Explanation:  $\$1,500,000 / 30,000 = \$50.00$

Diff: 1 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Applying

Objective: LO 2-4

36) What is the amount of ending finished goods inventory?

- A) \$42,500
- B) \$24,750
- C) \$25,000
- D) \$25,425
- E) \$42,500

Answer: C

Explanation:  $(30,000 - 29,500) \times (\$1,500,000/\$30,000) = \$25,000$

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

Skill: Applying

Objective: LO 2-4

Use the information below to answer the following question(s).

Frazer Inc. had the following activities in the year:

|                                     |           |
|-------------------------------------|-----------|
| Direct materials:                   |           |
| Beginning inventory                 | \$100,000 |
| Purchases                           | 308,000   |
| Ending inventory                    | 52,000    |
| Direct manufacturing labour         | 80,000    |
| Manufacturing overhead              | 60,000    |
| Ending work in process inventory    | 20,000    |
| Beginning work in process inventory | 4,000     |
| Ending finished goods inventory     | 80,000    |
| Beginning finished goods inventory  | 120,000   |

38) What is Frazer's cost of direct materials used during the year?

- A) \$356,000
- B) \$360,000
- C) \$308,000
- D) \$364,000
- E) \$372,000

Answer: A

Explanation:  $\$100,000 + \$308,000 - \$52,000 = \$356,000$

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Applying

Objective: LO 2-4

39) What is Frazer's cost of goods sold?

- A) \$520,000
- B) \$464,000
- C) \$440,000
- D) \$400,000
- E) \$516,000

Answer: A

Explanation:  $\$120,000 + \$480,000 - \$80,000 = \$520,000$

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Applying

Objective: LO 2-4

40) What is Frazer's cost of goods manufactured?

- A) \$536,000
- B) \$496,000
- C) \$480,000
- D) \$476,000
- E) \$512,000

Answer: C

Explanation:  $(\$100,000 + \$308,000 - \$52,000) + \$80,000 + \$60,000 + \$4,000 - \$20,000 = \$480,000$

Diff: 2 Type: MC

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-4

42) Which of the following formulas determine cost of goods sold in a manufacturing entity?

- A) Beginning work-in-process inventory + Cost of goods manufactured - Ending work-in-process inventory = Cost of goods sold
- B) Beginning work-in-process inventory + Cost of goods manufactured + Ending work-in-process inventory = Cost of goods sold
- C) Cost of goods manufactured - Beginning finished goods inventory - Ending finished goods inventory = Cost of goods sold
- D) Cost of goods manufactured + Beginning finished goods inventory - Ending finished goods inventory = Cost of goods sold
- E) Beginning work-in-process inventory - Cost of goods manufactured + Ending work-in-process inventory = Cost of goods sold

Answer: D

Diff: 2 Type: MC

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Understanding

Objective: LO 2-4

43) The following information pertains to Tom's Country Wood Shop:

|                                    |          |
|------------------------------------|----------|
| Beginning finished goods, 1/1/2018 | \$15,000 |
| Ending finished goods, 12/31/2018  | 9,500    |
| Cost of goods sold                 | 56,000   |
| Sales                              | 112,500  |
| Operating expenses                 | 25,000   |

What is the cost of goods manufactured for 2018?

- A) \$56,500
- B) \$31,500
- C) \$50,500
- D) \$61,500
- E) \$66,500

Answer: C

Explanation:  $\$56,000 + \$9,500 - \$15,000 = \$50,500$

Diff: 2 Type: MC

*Use the information below to answer the following question(s).*

Ontario Industries Inc. had the following activities during the year:

|                                          |          |
|------------------------------------------|----------|
| Direct materials:                        |          |
| Beginning inventory                      | \$40,000 |
| Purchases                                | 165,000  |
| Ending inventory                         | 32,000   |
| Direct manufacturing labour              | 46,000   |
| Manufacturing overhead                   | ?        |
| Ending work-in-process inventory         | 12,000   |
| Beginning work-in-process inventory      | ?        |
| Ending finished goods inventory          | ?        |
| Beginning finished goods inventory       | 80,000   |
| Cost of goods manufactured               | 242,000  |
| Manufacturing costs incurred             | 248,000  |
| Cost of goods sold                       | 247,000  |
| Total manufacturing costs to account for | 254,000  |

57) What is the amount of Ontario Industries Inc.'s ending finished goods inventory?

- A) \$55,000
- B) \$75,000
- C) \$70,000
- D) \$65,000
- E) \$60,000

Answer: B

Explanation:  $\$247,000 - \$242,000 - \$80,000 = \$75,000$

|                                         |                  |
|-----------------------------------------|------------------|
| Direct materials:                       |                  |
| Beginning inventory                     | \$40,000         |
| Purchases                               | 165,000          |
| Ending inventory                        | 32,000           |
| Direct materials used                   | \$173,000        |
| Direct manufacturing labour             | 46,000           |
| Manufacturing overhead                  | 29,000           |
| Manufacturing costs incurred            | \$248,000        |
| Beginning work-in-process inventory     | 6,000            |
| Total manufacturing cost to account for | \$254,000        |
| Ending work-in-process inventory        | 12,000           |
| Cost of goods manufactured              | <u>\$242,000</u> |
|                                         |                  |
| Beginning finished goods inventory      | \$80,000         |
| Cost of goods manufactured              | 242,000          |
| Ending finished goods inventory         | 75,000           |
| Cost of goods sold                      | <u>\$247,000</u> |

| Revenues                          |             | \$120.00       |
| Cost of Goods Sold:               |             |                |
| Direct Materials                  | \$15.00     |                |
| Direct Labour                     | 20.00       |                |
| Variable Manufacturing Overhead   | 10.00       |                |
| Fixed Manufacturing Overhead      | <u>6.00</u> |                |
| Total Cost of Goods Sold          |             | <u>51.00</u>   |
| Gross Margin                      |             | \$69.00        |
| Selling and Administrative Costs: |             |                |
| Sales Commissions (10% of Sales)  | \$12.00     |                |
| Administrative Salaries           | <u>5.00</u> |                |
| Total Selling and Administrative  |             | <u>17.00</u>   |
| Operating Income <Loss>           |             | <u>\$52.00</u> |

The Fixed Manufacturing Overhead provides a capacity of 50,000 units. The Production Manager has proposed leasing a new machine at a cost of \$80,000 per year. This will reduce Direct Labour by 30% and improve quality so the the selling price per unit can be increased by \$10. Production and sales are expected to remain the same as last year.

Required:

Prepare a statement of operating income assuming the leasing proposal is accepted.

Answer:

|                                       |          | 1 unit    |                | 40,000 units     |
|---------------------------------------|----------|-----------|----------------|------------------|
| Revenue (\$120 + \$10)                |          | \$130     |                | \$5,200,000      |
| Cost of goods sold                    |          |           |                |                  |
| DM                                    | \$15     |           | \$600,000      |                  |
| DL \$20 × (1 - 30%)                   | 14       |           | 560,000        |                  |
| VMOH                                  | 10       |           | 400,000        |                  |
| FMOH (\$6 × 40,000 + \$80,000)/40,000 | 8        | <u>47</u> | <u>320,000</u> | <u>1,880,000</u> |
| Gross Profit                          |          | \$83      |                | \$3,320,000      |
| Selling & Administration Costs        |          |           |                |                  |
| Sales Commissions (10% of Sales)      | \$13     |           | \$520,000      |                  |
| Administration Salaries               | <u>5</u> | <u>18</u> | <u>200,000</u> | <u>720,000</u>   |
| Operating Income                      |          | \$65      |                | \$2,600,000      |

Recommendation: Accept the leasing proposal as it raises OI by \$13 per unit or \$520,000.

63) Ames Power Point had sales in October of \$28,000,000 for its three stores in Toronto. The beginning merchandise inventories for October and November were \$5,000,000 and \$4,000,000, respectively. October purchases totalled \$19,000,000. All sales are on account (terms 2/15, net 30 days) and are collected 50 percent in the month of the sale and 50 percent in the following month. One-half of all sales discounts are taken for a total of \$265,000. September sales totalled \$25,000,000 while November sales were \$30,000,000. Additional information for October is as follows:

|                                     |             |
|-------------------------------------|-------------|
| Supplies used                       | \$1,000,000 |
| Salaries and benefits               | 1,500,000   |
| Maintenance                         | 45,000      |
| Amortization                        | 9,000       |
| Utilities                           | 35,000      |
| Principal payment on maturing bonds | 2,000,000   |

Required:

Using an appropriately formatted income statement, determine the operating income of the company.

Answer:

Ames Power Point Company

66) The following information is taken from the records of Britton Company for March:

Purchases:

|                             |             |
|-----------------------------|-------------|
| Direct materials            | \$9,000,000 |
| Indirect materials          | 200,000     |
| Office supplies             | 420,000     |
| Sales                       | 36,000,000  |
| Salaries and Benefits:      |             |
| Selling and administrative  | 4,000,000   |
| Direct manufacturing labour | 6,000,000   |
| Rent*                       | 4,000,000   |
| Utilities*                  | 1,200,000   |
| Advertising                 | 700,000     |

|                    |                |                 |
|--------------------|----------------|-----------------|
| Inventories:       | <u>March 1</u> | <u>March 31</u> |
| Direct materials   | \$4,400,000    | \$1,600,000     |
| Indirect materials | 500,000        | 600,000         |
| Office supplies    | 150,000        | 180,000         |
| Finished goods     | 24,000,000     | 16,000,000      |

\* Of these costs, 60 percent are assigned to manufacturing and 40 percent to selling and administration.

Required:

- Prepare a schedule of cost of goods manufactured.
- Prepare an income statement for the month.
- Compute the prime costs using a two-part production costing system, conversion costs, and indirect manufacturing costs.

Answer:

a.

Britton Company  
Cost of Goods Manufactured Schedule  
For March

Direct materials:

|                                     |                  |                     |
|-------------------------------------|------------------|---------------------|
| Beginning inventory                 | \$4,400,000      |                     |
| Purchases of direct materials       | <u>9,000,000</u> |                     |
| Cost of direct materials available  | \$13,400,000     |                     |
| Ending inventory                    | <u>1,600,000</u> |                     |
| Direct materials used               |                  | \$11,800,000        |
| Direct manufacturing labour         |                  | 6,000,000           |
| Manufacturing overhead:             |                  |                     |
| Rent (60%)                          | \$2,400,000      |                     |
| Utilities (60%)                     | 720,000          |                     |
| Indirect materials                  |                  |                     |
| (\$200,000 + \$500,000 - \$600,000) | <u>100,000</u>   | <u>3,220,000</u>    |
| Cost of goods manufactured          |                  | <u>\$21,020,000</u> |

b.

Britton Company  
Income Statement  
For the Month of March

|                                     |                   |                            |

68) Find the required amounts, assuming each is an independent case.

|                              |                             |          |
|------------------------------|-----------------------------|----------|
| a. Direct Materials          | Beginning balance           | \$14,000 |
|                              | Ending balance              | 28,000   |
|                              | Purchases                   | 96,000   |
|                              | Direct materials used       | ?        |
| b. Finished Goods Inventory  | Cost of goods manufactured  | 124,000  |
|                              | Ending balance              | 40,000   |
|                              | Cost of goods sold          | 122,000  |
|                              | Beginning balance           | ?        |
| c. Work in Process Inventory | Ending Balance              | 44,000   |
|                              | Cost of goods manufactured  | 42,000   |
|                              | Beginning balance           | 16,000   |
|                              | Current manufacturing costs | ?        |
| d. Merchandise Inventory     | Purchases                   | 420,000  |
|                              | Cost of goods sold          | 446,000  |
|                              | Beginning balance           | 82,000   |
|                              | Ending balance              | ?        |

Answer:

- a. Direct materials used  $\$14,000 + \$96,000 - \$28,000 = \$82,000$
- b. Beginning balance of finished goods inventory  
 $\$40,000 + \$122,000 - \$124,000 = \$38,000$
- c. Current manufacturing costs  $\$42,000 + \$44,000 - \$16,000 = \$70,000$
- d. Ending balance of merchandise inventory  
 $\$82,000 + \$420,000 - \$446,000 = \$56,000$

Diff: 3 Type: ES

CPA Competencies: Chapter 2 -

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Objective: LO 2-4

69) Evans Inc., had the following activities during 2018:

Direct materials:

|                                     |          |
|-------------------------------------|----------|
| Beginning inventory                 | \$40,000 |
| Purchases                           | 123,200  |
| Ending inventory                    | 20,800   |
| Direct manufacturing labour         | 32,000   |
| Manufacturing overhead              | 24,000   |
| Beginning work-in-process inventory | 1,600    |
| Ending work-in-process inventory    | 8,000    |
| Beginning finished goods inventory  | 48,000   |
| Ending finished goods inventory     | 32,000   |

Required:

- What is the cost of direct materials used during 2018?
- What is cost of goods manufactured for 2018?
- What is cost of goods sold for 2018?

Assume that Evans uses a two-part classification system for prime and conversion costs.

- What amount of prime costs was added to production during 2018?
- What amount of conversion costs was added to production during 2018?

Answer:

- $\$40,000 + \$123,200 - \$20,800 = \$142,400$
- $\$142,400 + \$32,000 + \$24,000 + \$1,600 - \$8,000 = \$192,000$
- $\$192,000 + \$48,000 - \$32,000 = \$208,000$
- $\$142,400 + \$32,000 = \$174,400$
- $\$32,000 + \$24,000 = \$56,000$

70) Messinger Manufacturing Company had the following account balances for the quarter ending March 31, unless otherwise noted:

|                                                |           |
|------------------------------------------------|-----------|
| Work-in-process inventory (January 1)          | \$140,400 |
| Work-in-process inventory (March 31)           | 171,000   |
| Finished goods inventory (January 1)           | 540,000   |
| Finished goods inventory (March 31)            | 510,000   |
| Direct materials used                          | 378,000   |
| Indirect materials used                        | 84,000    |
| Direct manufacturing labour                    | 480,000   |
| Indirect manufacturing labour                  | 186,000   |
| Property taxes on manufacturing plant building | 28,800    |
| Salespersons' company vehicle costs            | 12,000    |
| Amortization of manufacturing equipment        | 264,000   |
| Amortization of office equipment               | 123,600   |
| Miscellaneous plant overhead                   | 135,000   |
| Plant utilities                                | 92,400    |
| General office expenses                        | 305,400   |
| Marketing distribution costs                   | 30,000    |

Required:

- Prepare a cost of goods manufactured schedule for the quarter.
- Prepare a cost of goods sold schedule for the quarter.

Answer:

a.

Messinger Manufacturing Company  
Cost of Goods Manufactured Schedule  
For quarter ending March 31

|                                         |               |                    |
|-----------------------------------------|---------------|--------------------|
| Direct materials used                   |               | \$378,000          |
| Direct manufacturing labour             |               | 480,000            |
| Manufacturing overhead                  |               |                    |
| Amortization of manufacturing equipment | \$264,000     |                    |
| Indirect manufacturing labour           | 186,000       |                    |
| Indirect materials                      | 84,000        |                    |

72) Helmer Sporting Goods Company manufactured 100,000 units in 2018 and reported the following costs:

|                               |           |                            |            |
|-------------------------------|-----------|----------------------------|------------|
| Sandpaper                     | \$32,000  | Leasing costs-plant        | \$384,000  |
| Materials handling            | 320,000   | Amortization-equipment     | 224,000    |
| Coolants & lubricants         | 22,400    | Property taxes-equipment   | 32,000     |
| Indirect manufacturing labour | 275,200   | Fire insurance-equipment   | 16,000     |
| Direct manufacturing labour   | 2,176,000 | Direct material purchases  | 3,136,000  |
| Direct materials, 1/1/18      | 384,000   | Direct materials, 12/31/18 | 275,200    |
| Finished goods, 1/1/18        | 672,000   | Sales revenue              | 12,800,000 |
| Finished goods, 12/31/18      | 1,280,000 | Sales commissions          | 640,000    |
| Work-in-process, 1/1/18       | 96,000    | Sales salaries             | 576,000    |
| Work-in-process, 12/31/18     | 64,000    | Advertising costs          | 480,000    |
|                               |           | Administration costs       | 800,000    |

Required:

- What is the cost of direct materials used during 2018?
- What manufacturing costs were added to WIP during 2018?
- What is cost of goods manufactured for 2018?
- What is cost of goods sold for 2018?

Answer:

a.  $\$384,000 + \$3,136,000 - \$275,200 = \$3,244,800$

b.  $\$3,244,800 + \$2,176,000 + \$32,000 + \$320,000 + \$22,400 + \$275,200 + \$384,000 + \$224,000 + \$32,000 + \$16,000 = \$6,726,400$

c.  $\$6,726,400 + \$96,000 - \$64,000 = \$6,758,400$

d.  $\$6,758,400 + \$672,000 - \$1,280,000 = \$6,150,400$

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Analyzing

Objective: LO 2-4

76) Explain the difference between an inventoriable cost and a period cost. What potential problems does an inaccurate classification of product and period costs cause?

Answer: Inventoriable costs are all costs of a product that are considered as assets in the balance sheet when they are incurred and which become cost of goods sold only when the product is sold. Period costs are treated as expenses of the accounting period in which they are incurred. An inaccurate classification of inventoriable and period costs could lead to violations of the matching principle, which states that costs used in producing revenue should be matched on the income statement when the revenue is recognized. In extreme cases, net income for a given period might be significantly misstated if proper matching does not occur.

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-5

10) Why is it possible that a raw material such as glue might be considered as an indirect material for one furniture manufacturer and as a direct material for another furniture manufacturer?

Answer: It is possible for a raw material such as glue to be considered as an indirect material by one furniture manufacturer and as a direct material by another furniture manufacturer. The decision is largely a choice by the manufacturer and depends on a number of factors including the materiality of the cost in question, the cost of gathering the information, and the design of the manufacturing process. If the product in question has an insignificant cost, it might not be worth the trouble to trace the cost of the glue to each piece of furniture, and the glue would be considered indirect. If the cost of tracing the cost of the glue is high in relation to the benefits received from tracing it, the glue would likely be considered as indirect material. If the design of the manufacturing process easily permits all the glue to be traced to a single type of furniture, then it would be easy for a company to consider that material to be direct.

Overall, the direct/indirect classification is decided on a cost/benefit basis.

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Applying

Objective: LO 2-5

11) When should the overtime premium of direct manufacturing labour be considered an indirect manufacturing cost? A direct manufacturing cost?

Answer: The overtime premium of direct manufacturing labour should be considered an indirect manufacturing cost when it is attributable to the overall volume of work, and a direct manufacturing cost when a "rush job" is the sole source of the overtime.

3.1.2 Evaluates and applies cost management techniques appropriate for specific costing decisions,

3.3.1 Evaluates cost classifications and costing methods for management of ongoing operations

Skill: Remembering

Objective: LO 2-5

12) The types of costs included in the product cost differ depending on the purpose of the costing. Describe the generic value chain categories that are pertinent to product costs regarding ASPE/IFRS-compliant inventorable costs; and, product costs for product pricing and product mix decisions.

Answer: ASPE/IFRS compliant inventorable costs are limited to manufacturing costs which are represented in the production costs category on the value chain.

For pricing and product mix decisions all costs related to a product are relevant so the product cost can include costs from all value chain categories.
