Chapter 1

Managerial Accounting and Cost Concepts

Questions

1-1 The three major types of product costs in a manufacturing company are direct materials, direct labor, and manufacturing overhead.

1-2

a. Direct materials are an integral part of a finished product and their costs can be conveniently traced to it.

b. Indirect materials are generally small items of material such as glue and nails. They may be an integral part of a finished product but their costs can be traced to the product only at great cost or inconvenience.

c. Direct labor consists of labor costs that can be easily traced to particular products. Direct labor is also called "touch labor."

d. Indirect labor consists of the labor costs of janitors, supervisors, materials handlers, and other factory workers that cannot be conveniently traced to particular products. These labor costs are incurred to support production, but the workers involved do not directly work on the product.

e. Manufacturing overhead includes all manufacturing costs except direct materials and direct labor. Consequently, manufacturing overhead includes indirect materials and indirect labor as well as other manufacturing costs.

1-3 A product cost is any cost involved in purchasing or manufacturing goods. In the case of manufactured goods, these costs consist of direct materials, direct labor, and manufacturing overhead. A period cost is a cost that is taken directly to the income statement as an expense in the period in which it is incurred.

1-4

- a.** Variable cost: The variable cost per unit is constant, but total variable cost changes in direct proportion to changes in volume.
- b.** Fixed cost: The total fixed cost is constant within the relevant range. The *average* fixed cost per unit varies inversely with changes in volume.
- c.** Mixed cost: A mixed cost contains both variable and fixed cost elements.

1-5

- a.** Unit fixed costs decrease as the activity level increases.
- b.** Unit variable costs remain constant as the activity level increases.
- c.** Total fixed costs remain constant as the activity level increases.
- d.** Total variable costs increase as the activity level increases.

1-6

- a.** Cost behavior: Cost behavior refers to the way in which costs change in response to changes in a measure of activity such as sales volume, production volume, or orders processed.
- b.** Relevant range: The relevant range is the range of activity within which assumptions about variable and fixed cost behavior are valid.

1-7 An activity base is a measure of whatever causes the incurrence of a variable cost. Examples of activity bases include units produced, units sold, letters typed, beds in a hospital, meals served in a cafe, service calls made, etc.

1-8 The linear assumption is reasonably valid providing that the cost formula is used only within the relevant range.

1-9 A discretionary fixed cost has a fairly short planning horizon—usually a year. Such costs arise from annual decisions by management to spend on certain fixed cost items, such as advertising, research, and management development. A committed fixed cost has a long planning horizon—generally many years. Such costs relate to a company's investment in facilities, equipment, and basic organization. Once such costs have been incurred, they are "locked in" for many years.

1-10 Yes. As the anticipated level of activity changes, the level of fixed costs needed to support operations may also change. Most fixed costs are adjusted upward and downward in large steps, rather than being absolutely fixed at one level for all ranges of activity.

1-11 The traditional approach organizes costs by function, such as production, selling, and administration. Within a functional area, fixed and variable costs are intermingled. The contribution approach income statement organizes costs by behavior, first deducting variable expenses to obtain contribution margin, and then deducting fixed expenses to obtain net operating income.

1-12 The contribution margin is total sales revenue less total variable expenses.

1-13 A differential cost is a cost that differs between alternatives in a decision. An opportunity cost is the potential benefit that is given up when one alternative is selected over another. A sunk cost is a cost that has already been incurred and cannot be altered by any decision taken now or in the future.

1-14 No, differential costs can be either variable or fixed. For example, the alternatives might consist of purchasing one machine rather than another to make a product. The difference between the fixed costs of purchasing the two machines is a differential cost.

Chapter 1: Applying Excel

The completed worksheet is shown below.

	A	B	C	D
1	Chapter 1: Applying Excel			
2				
3	Data			
4	Sales	\$12,000		
5	Variable costs:			
6	Cost of goods sold	\$6,000		
7	Variable selling	\$600		
8	Variable administrative	\$400		
9	Fixed costs:			
10	Fixed selling	\$2,500		
11	Fixed administrative	\$1,500		
12				
13	Enter a formula into each of the cells marked with a ? below			
14	Exhibit 1-7			
15				
16	Traditional Format Income Statement			
17	Sales		\$ 12,000	
18	Cost of goods sold		6,000	
19	Gross margin		6,000	
20	Selling and administrative expenses:			
21	Selling	\$ 3,100		
22	Administrative	1,900	5,000	
23	Net operating income		\$ 1,000	
24				
25	Contribution Format Income Statement			
26	Sales		\$ 12,000	
27	Variable expenses:			
28	Cost of goods sold	\$ 6,000		
29	Variable selling	600		
30	Variable administration	400	7,000	
31	Contribution margin		5,000	
32	Fixed expenses:			
33	Fixed selling	2,500		
34	Fixed administrative	1,500	4,000	
35	Net operating income		\$ 1,000	
36				

Chapter 1: Applying Excel (continued)

The completed worksheet, with formulas displayed, is shown below.

	A	B	C	D
1	Chapter 1: Applying Excel			
2				
3	Data			
4	Sales	12000		
5	Variable costs:			
6	Cost of goods sold	6000		
7	Variable selling	600		
8	Variable administrative	400		
9	Fixed costs:			
10	Fixed selling	2500		
11	Fixed administrative	1500		
12				
13	Enter a formula into each of the cells marked with a ? below			
14	Exhibit 1-7			
15				
16	Traditional Format Income Statement			
17	Sales		=B4	
18	Cost of goods sold		=B6	
19	Gross margin		=C17-C18	
20	Selling and administrative expenses:			
21	Selling	=B7+B10		
22	Administrative	=B8+B11	=B21+B22	
23	Net operating income		=C19-C22	
24				
25	Contribution Format Income Statement			
26	Sales		=B4	
27	Variable expenses:			
28	Cost of goods sold	=B6		
29	Variable selling	=B7		
30	Variable administration	=B8	=SUM(B28:B30)	
31	Contribution margin		=C26-C30	
32	Fixed expenses:			
33	Fixed selling	=B10		
34	Fixed administrative	=B11	=SUM(B33:B34)	
35	Net operating income		=C31-C34	
36				

[Note: To display formulas in cells instead of their calculated amounts, consult Excel Help.]

Chapter 1: Applying Excel (continued)

- When the variable selling cost is changed to \$900, the worksheet changes as show below:

	A	B	C	D
1	Chapter 1: Applying Excel			
2				
3	Data			
4	Sales	\$12,000		
5	Variable costs:			
6	Cost of goods sold	\$6,000		
7	Variable selling	\$900		
8	Variable administrative	\$400		
9	Fixed costs:			
10	Fixed selling	\$2,500		
11	Fixed administrative	\$1,500		
12				
13	Enter a formula into each of the cells marked with a ? below			
14	Exhibit 1-7			
15				
16	Traditional Format Income Statement			
17	Sales		\$ 12,000	
18	Cost of goods sold		6,000	
19	Gross margin		6,000	
20	Selling and administrative expenses:			
21	Selling	\$ 3,400		
22	Administrative	1,900	5,300	
23	Net operating income		\$ 700	
24				
25	Contribution Format Income Statement			
26	Sales		\$ 12,000	
27	Variable expenses:			
28	Cost of goods sold	\$ 6,000		
29	Variable selling	900		
30	Variable administration	400	7,300	
31	Contribution margin		4,700	
32	Fixed expenses:			
33	Fixed selling	2,500		
34	Fixed administrative	1,500	4,000	
35	Net operating income		\$ 700	
36				

The gross margin is \$6,000; the same as it was before. It did not change because the variable selling expense is deducted *after* the gross margin, not before it on the traditional format income statement.

Chapter 1: Applying Excel (continued)

2. The new worksheet appears below:

	A	B	C	D
1	Chapter 1: Applying Excel			
2				
3	Data			
4	Sales	\$13,200		
5	Variable costs:			
6	Cost of goods sold	\$6,600		
7	Variable selling	\$660		
8	Variable administrative	\$440		
9	Fixed costs:			
10	Fixed selling	\$2,500		
11	Fixed administrative	\$1,500		
12				
13	Enter a formula into each of the cells marked with a ? below			
14	Exhibit 1-7			
15				
16	Traditional Format Income Statement			
17	Sales		\$ 13,200	
18	Cost of goods sold		6,600	
19	Gross margin		6,600	
20	Selling and administrative expenses:			
21	Selling	\$ 3,160		
22	Administrative	1,940	5,100	
23	Net operating income		\$ 1,500	
24				
25	Contribution Format Income Statement			
26	Sales		\$ 13,200	
27	Variable expenses:			
28	Cost of goods sold	\$ 6,600		
29	Variable selling	660		
30	Variable administration	440	7,700	
31	Contribution margin		5,500	
32	Fixed expenses:			
33	Fixed selling	2,500		
34	Fixed administrative	1,500	4,000	
35	Net operating income		\$ 1,500	
36				

Chapter 1: Applying Excel (continued)

The variable costs increased by 10% when the sales increased by 10%, however the fixed costs did not increase at all. By definition, total variable cost increases in proportion to activity whereas total fixed cost is constant. (In the real world, cost behavior may be messier.)

The contribution margin also increased by 10%, from \$5,000 to \$5,500, because both of its components—sales and variable costs—increased by 10%.

The net operating income increased by more than 10%, from \$1,000 to \$1,500, because even though sales and variable expenses increased by 10%, the fixed costs did not increase by 10%.

The Foundational 15

1. Direct materials.....	\$ 6.00	
Direct labor.....	3.50	
Variable manufacturing overhead	<u>1.50</u>	
Variable manufacturing cost per unit	<u>\$11.00</u>	
Variable manufacturing cost per unit (a)	\$11.00	
Number of units produced (b).....	10,000	
Total variable manufacturing cost (a) × (b)...		\$110,000
Average fixed manufacturing overhead per unit (c)	\$4.00	
Number of units produced (d).....	10,000	
Total fixed manufacturing cost (c) × (d)		<u>40,000</u>
Total product (manufacturing) cost.....		<u>\$150,000</u>

Note: The average fixed manufacturing overhead cost per unit of \$4.00 is valid for only one level of activity—10,000 units produced.

2. Sales commissions	\$1.00	
Variable administrative expense	<u>0.50</u>	
Variable selling and administrative per unit ...	<u>\$1.50</u>	
Variable selling and admin. per unit (a)	\$1.50	
Number of units sold (b).....	10,000	
Total variable selling and admin. expense (a) × (b)		\$15,000
Average fixed selling and administrative expense per unit (\$3 fixed selling + \$2 fixed admin.) (c).....	\$5.00	
Number of units sold (d).....	10,000	
Total fixed selling and administrative expense (c) × (d)		<u>50,000</u>
Total period (nonmanufacturing) cost		<u>\$65,000</u>

Note: The average fixed selling and administrative expense per unit of \$5.00 is valid for only one level of activity—10,000 units sold.

The Foundational 15 (continued)

3.	Direct materials.....	\$ 6.00
	Direct labor.....	3.50
	Variable manufacturing overhead	1.50
	Sales commissions.....	1.00
	Variable administrative expense	<u>0.50</u>
	Variable cost per unit sold.....	<u>\$12.50</u>
4.	Direct materials.....	\$ 6.00
	Direct labor.....	3.50
	Variable manufacturing overhead	1.50
	Sales commissions.....	1.00
	Variable administrative expense	<u>0.50</u>
	Variable cost per unit sold.....	<u>\$12.50</u>
5.	Variable cost per unit sold (a)	\$12.50
	Number of units sold (b).....	8,000
	Total variable costs (a) × (b).....	\$100,000
6.	Variable cost per unit sold (a)	\$12.50
	Number of units sold (b).....	12,500
	Total variable costs (a) × (b).....	\$156,250
7.	Total fixed manufacturing cost (see requirement 1) (a).....	\$40,000
	Number of units produced (b).....	8,000
	Average fixed manufacturing cost per unit produced (a) ÷ (b)	\$5.00
8.	Total fixed manufacturing cost (see requirement 1) (a).....	\$40,000
	Number of units produced (b).....	12,500
	Average fixed manufacturing cost per unit produced (a) ÷ (b)	\$3.20
9.	Total fixed manufacturing cost (see requirement 1).....	\$40,000

The Foundational 15 (continued)

10. Total fixed manufacturing cost (see requirement 1).....	\$40,000	
11. Variable overhead per unit (a).....	\$1.50	
Number of units produced (b).....	8,000	
Total variable overhead cost (a) × (b)		\$12,000
Total fixed overhead (see requirement 1).....		<u>40,000</u>
Total manufacturing overhead cost.....		<u>\$52,000</u>
 Total manufacturing overhead cost (a).....		\$52,000
Number of units produced (b)		8,000
Manufacturing overhead per unit (a) ÷ (b)...		\$6.50
 12. Variable overhead per unit (a).....	\$1.50	
Number of units produced (b).....	12,500	
Total variable overhead cost (a) × (b)		\$18,750
Total fixed overhead (see requirement 1).....		<u>40,000</u>
Total manufacturing overhead cost.....		<u>\$58,750</u>
 Total manufacturing overhead cost (a).....		\$58,750
Number of units produced (b)		12,500
Manufacturing overhead per unit (a) ÷ (b)...		\$4.70
 13. Selling price per unit.....	\$22.00	
Variable cost per unit sold (see requirement 4).....		<u>12.50</u>
Contribution margin per unit		<u>\$ 9.50</u>

The Foundational 15 (continued)

14. Direct materials per unit	\$6.00	
Direct labor per unit	<u>3.50</u>	
Direct manufacturing cost per unit	<u>\$9.50</u>	
Direct manufacturing cost per unit (a)	\$9.50	
Number of units produced (b)	11,000	
Total direct manufacturing cost (a) × (b)	\$104,500	
Variable overhead per unit (a)	\$1.50	
Number of units produced (b)	11,000	
Total variable overhead cost (a) × (b)		\$16,500
Total fixed overhead (see requirement 1)		<u>40,000</u>
Total indirect manufacturing cost		<u>\$56,500</u>
15. Direct materials per unit	\$6.00	
Direct labor per unit	3.50	
Variable manufacturing overhead per unit	<u>1.50</u>	
Incremental cost per unit produced	<u>\$11.00</u>	

Note: Variable selling and administrative expenses are variable with respect to the number of units sold, not the number of units produced.

Exercise 1-1 (15 minutes)

<i>Cost</i>	<i>Cost Object</i>	<i>Direct Cost</i>	<i>Indirect Cost</i>
1. The wages of pediatric nurses	The pediatric department	X	
2. Prescription drugs	A particular patient	X	
3. Heating the hospital	The pediatric department		X
4. The salary of the head of pediatrics	The pediatric department	X	
5. The salary of the head of pediatrics	A particular pediatric patient		X
6. Hospital chaplain's salary	A particular patient		X
7. Lab tests by outside contractor	A particular patient	X	
8. Lab tests by outside contractor	A particular department	X	

Exercise 1-2 (10 minutes)

1. The cost of a hard drive installed in a computer: direct materials.
2. The cost of advertising in the *Puget Sound Computer User* newspaper: selling.
3. The wages of employees who assemble computers from components: direct labor.
4. Sales commissions paid to the company's salespeople: selling.
5. The salary of the assembly shop's supervisor: manufacturing overhead.
6. The salary of the company's accountant: administrative.
7. Depreciation on equipment used to test assembled computers before release to customers: manufacturing overhead.
8. Rent on the facility in the industrial park: a combination of manufacturing overhead, selling, and administrative. The rent would most likely be prorated on the basis of the amount of space occupied by manufacturing, selling, and administrative operations.

Exercise 1-3 (15 minutes)

	<i>Product Cost</i>	<i>Period Cost</i>
1. Depreciation on salespersons' cars		X
2. Rent on equipment used in the factory	X	
3. Lubricants used for machine maintenance	X	
4. Salaries of personnel who work in the finished goods warehouse		X
5. Soap and paper towels used by factory workers at the end of a shift.....	X	
6. Factory supervisors' salaries.....	X	
7. Heat, water, and power consumed in the factory ...	X	
8. Materials used for boxing products for shipment overseas (units are not normally boxed)		X
9. Advertising costs.....		X
10. Workers' compensation insurance for factory employees.....	X	
11. Depreciation on chairs and tables in the factory lunchroom.....	X	
12. The wages of the receptionist in the administrative offices.....		X
13. Cost of leasing the corporate jet used by the company's executives		X
14. The cost of renting rooms at a Florida resort for the annual sales conference.....		X
15. The cost of packaging the company's product.....	X	

Exercise 1-4 (15 minutes)

1.

	<i>Cups of Coffee Served in a Week</i>		
	<i>2,000</i>	<i>2,100</i>	<i>2,200</i>
Fixed cost.....	\$1,200	\$1,200	\$1,200
Variable cost.....	<u>440</u>	<u>462</u>	<u>484</u>
Total cost	<u>\$1,640</u>	<u>\$1,662</u>	<u>\$1,684</u>
Average cost per cup served *...	\$0.820	\$0.791	\$0.765

* Total cost ÷ cups of coffee served in a week

2. The average cost of a cup of coffee decreases as the number of cups of coffee served increases because the fixed cost is spread over more cups of coffee.

Exercise 1-5 (15 minutes)

<i>Item</i>	<i>Differential Cost</i>	<i>Sunk Cost</i>	<i>Opportunity Cost</i>
1. Cost of the old X-ray machine		X	
2. The salary of the head of the Radiology Department.....			
3. The salary of the head of the Laboratory Department			
4. Cost of the new color laser printer.....	X		
5. Rent on the space occupied by Radiology			
6. The cost of maintaining the old machine	X		
7. Benefits from a new DNA analyzer			X
8. Cost of electricity to run the X- ray machines.....	X		

Note: The costs of the salaries of the head of the Radiology Department and Laboratory Department and the rent on the space occupied by Radiology are neither differential costs, nor opportunity costs, nor sunk costs. These costs do not differ between the alternatives and therefore are irrelevant in the decision, but they are not sunk costs because they occur in the future.

Exercise 1-6 (15 minutes)

1. Traditional income statement

Cherokee Inc. Traditional Income Statement		
Sales (\$30 per unit × 20,000 units)		\$600,000
Cost of goods sold		
(\$24,000 + \$180,000 – \$44,000)		<u>160,000</u>
Gross margin		440,000
Selling and administrative expenses:		
Selling expenses		
((\$4 per unit × 20,000 units) + \$40,000)	\$120,000	
Administrative expenses		
((\$2 per unit × 20,000 units) + \$30,000)	<u>70,000</u>	<u>190,000</u>
Net operating income		<u>\$250,000</u>

2. Contribution format income statement

Cherokee Inc. Contribution Format Income Statement		
Sales (\$30 per unit × 20,000 units)		\$600,000
Variable expenses:		
Cost of goods sold		
(\$24,000 + \$180,000 – \$44,000)	\$160,000	
Selling expenses (\$4 per unit × 20,000 units)...	80,000	
Administrative expenses		
(\$2 per unit × 20,000 units)	<u>40,000</u>	<u>280,000</u>
Contribution margin.....		320,000
Fixed expenses:		
Selling expenses	40,000	
Administrative expenses	<u>30,000</u>	<u>70,000</u>
Net operating income		<u>\$250,000</u>

Exercise 1-7 (20 minutes)

1a. The total direct manufacturing cost incurred is computed as follows:

Direct materials per unit	\$7.00	
Direct labor per unit	<u>4.00</u>	
Direct manufacturing cost per unit (a)		\$11.00
Number of units sold (b).....		20,000
Total direct manufacturing cost (a) × (b)....		\$220,000

1b. The total indirect manufacturing cost incurred is computed as follows:

Variable manufacturing overhead per unit...	\$1.50	
Fixed manufacturing overhead per unit.....	<u>5.00</u>	
Indirect manufacturing cost per unit (a)		\$6.50
Number of units sold (b).....		20,000
Total indirect manufacturing cost (a) × (b) .		\$130,000

Note: The average fixed manufacturing overhead cost per unit of \$5.00 is valid for only one level of activity—20,000 units produced.

2a. The total manufacturing cost that is directly traceable to the Manufacturing Department is computed as follows:

Direct materials per unit	\$7.00	
Direct labor per unit	4.00	
Variable manufacturing overhead per unit...	1.50	
Fixed manufacturing overhead per unit.....	<u>5.00</u>	
Total manufacturing cost per unit (a).....		\$17.50
Number of units sold (b).....		20,000
Total direct costs (a) × (b).....		\$350,000

2b. None of the manufacturing costs should be treated as indirect costs when the cost object is the Manufacturing Department.

Exercise 1-7 (continued)

- 3a. The first step in calculating the total direct selling expense is to determine the fixed portion of the sales representatives' compensation as follows:

Fixed selling expense per unit (a).....	\$3.50	
Number of units sold (b).....	20,000	
Total fixed selling expense (a) × (b).....		\$70,000
Total fixed selling expense (a).....		\$70,000
Advertising expenditures (b)		\$50,000
Total fixed portion of the sales representatives' compensation (a) – (b)...		\$20,000

The second step is to calculate the total direct selling expense that is traceable to individual sales representatives as follows:

Sales commissions per unit (a).....	\$1.00	
Number of units sold (b).....	20,000	
Total sales commission (a) × (b).....		\$20,000
Fixed portion of sales representatives' compensation.....		<u>20,000</u>
Total direct selling expense		<u>\$40,000</u>

- 3b. The total indirect selling expense that cannot be traced to individual sales representatives is \$50,000. The advertising expenditures cannot be traced to specific sales representatives.
4. No. Kubin's administrative expenses could be direct or indirect depending on the cost object. For example, the chief financial officer's salary would be an indirect cost if the cost object is units of production; however, his salary would be a direct cost if the cost object is the Finance Department that he oversees.

Exercise 1-8 (20 minutes)

1. Direct materials.....	\$ 7.00	
Direct labor.....	4.00	
Variable manufacturing overhead	<u>1.50</u>	
Variable manufacturing cost per unit	<u>\$12.50</u>	
Variable manufacturing cost per unit (a)	\$12.50	
Number of units produced (b).....	20,000	
Total variable manufacturing cost (a) × (b)...		\$250,000
Average fixed manufacturing overhead per unit (c)	\$5.00	
Number of units produced (d).....	20,000	
Total fixed manufacturing cost (c) × (d)		<u>100,000</u>
Total product cost		<u>\$350,000</u>

Note: The average fixed manufacturing overhead cost per unit of \$5.00 is valid for only one level of activity—20,000 units produced.

2. Sales commissions	\$1.00	
Variable administrative expense	<u>0.50</u>	
Variable selling and administrative per unit ...	<u>\$1.50</u>	
Variable selling and admin. per unit (a)	\$1.50	
Number of units sold (b).....	20,000	
Total variable selling and admin. expense (a) × (b)		\$30,000
Average fixed selling and administrative expense per unit (\$3.50 fixed selling + \$2.50 fixed administrative) (c).....	\$6.00	
Number of units sold (d).....	20,000	
Total fixed selling and administrative expense (c) × (d)		<u>120,000</u>
Total period cost		<u>\$150,000</u>

Note: The average fixed selling and administrative expense per unit of \$6.00 is valid for only one level of activity—20,000 units sold.

Exercise 1-8 (continued)

3. Direct materials.....	\$ 7.00	
Direct labor.....	4.00	
Variable manufacturing overhead	<u>1.50</u>	
Variable manufacturing cost per unit	<u>\$12.50</u>	
Variable manufacturing cost per unit (a)	\$12.50	
Number of units produced (b).....	22,000	
Total variable manufacturing cost (a) × (b)...		\$275,000
Total fixed manufacturing cost (see requirement 1)		<u>100,000</u>
Total product cost		<u>\$375,000</u>
4. Sales commissions	\$1.00	
Variable administrative expense	<u>0.50</u>	
Variable selling and administrative per unit ...	<u>\$1.50</u>	
Variable selling and admin. per unit (a)	\$1.50	
Number of units sold (b).....	18,000	
Total variable selling and admin. expense (a) × (b)		\$27,000
Total fixed selling and administrative expense (see requirement 2).....		<u>120,000</u>
Total period cost		<u>\$147,000</u>

Exercise 1-9 (20 minutes)

1.	Direct materials.....	\$ 7.00
	Direct labor.....	4.00
	Variable manufacturing overhead	1.50
	Sales commissions.....	1.00
	Variable administrative expense	<u>0.50</u>
	Variable cost per unit sold.....	<u>\$14.00</u>
2.	Direct materials.....	\$ 7.00
	Direct labor.....	4.00
	Variable manufacturing overhead	1.50
	Sales commissions.....	1.00
	Variable administrative expense	<u>0.50</u>
	Variable cost per unit sold.....	<u>\$14.00</u>
3.	Variable cost per unit sold (a)	\$14.00
	Number of units sold (b).....	18,000
	Total variable costs (a) × (b).....	\$252,000
4.	Variable cost per unit sold (a)	\$14.00
	Number of units sold (b).....	22,000
	Total variable costs (a) × (b).....	\$308,000

Note: The key to answering questions 5 through 8 is to calculate the total fixed manufacturing overhead costs as follows:

Average fixed manufacturing overhead cost per unit (a).....	\$5.00
Number of units produced (b)	20,000
Total fixed manufacturing overhead (a) × (b)	\$100,000

Note: The average fixed manufacturing overhead cost per unit of \$5.00 is valid for only one level of activity—20,000 units produced.

Once students understand that total fixed manufacturing overhead is \$100,000, questions 5 through 8 are answered as follows:

Copyright 2021 © McGraw-Hill Education. All rights reserved. No reproduction or distribution without the prior written consent of McGraw-Hill Education.

Exercise 1-9 (continued)

5. The average fixed manufacturing overhead per unit is:

Total fixed manufacturing overhead (a).....	\$100,000
Number of units produced (b)	18,000
Average fixed manufacturing cost per unit produced (rounded) (a) ÷ (b).....	\$5.56

6. The average fixed manufacturing overhead per unit is:

Total fixed manufacturing overhead (a).....	\$100,000
Number of units produced (b)	22,000
Average fixed manufacturing cost per unit produced (rounded) (a) ÷ (b).....	\$4.55

7. The total fixed manufacturing overhead remains unchanged at \$100,000.

8. The total fixed manufacturing overhead remains unchanged at \$100,000.

Exercise 1-10 (10 minutes)

- | | |
|---|----------------|
| 1. Direct materials..... | \$ 7.00 |
| Direct labor..... | 4.00 |
| Variable manufacturing overhead | <u>1.50</u> |
| Total incremental cost..... | <u>\$12.50</u> |
| | |
| 2. Direct materials..... | \$ 7.00 |
| Direct labor..... | 4.00 |
| Variable manufacturing overhead | 1.50 |
| Sales commissions..... | 1.00 |
| Variable administrative expense | <u>0.50</u> |
| Variable cost per unit sold..... | <u>\$14.00</u> |
| | |
| 3. Because the 200 units to be sold to the new customer have already been produced, the incremental manufacturing cost per unit is zero. The variable manufacturing costs incurred to make these units have already been incurred and, as such, are sunk costs. | |
| | |
| 4. Sales commission | \$1.00 |
| Variable administrative expense | <u>0.50</u> |
| Variable cost per unit sold..... | <u>\$1.50</u> |

Exercise 1-11 (20 minutes)

1. The company's variable cost per unit is:

$$\frac{\$180,000}{30,000 \text{ units}} = \$6 \text{ per unit.}$$

The completed schedule is as follows:

	<i>Units produced and sold</i>		
	<i>30,000</i>	<i>40,000</i>	<i>50,000</i>
Total costs:			
Variable cost.....	\$180,000	\$240,000	\$300,000
Fixed cost.....	<u>300,000</u>	<u>300,000</u>	<u>300,000</u>
Total costs.....	<u>\$480,000</u>	<u>\$540,000</u>	<u>\$600,000</u>
Cost per unit:			
Variable cost.....	\$ 6.00	\$ 6.00	\$ 6.00
Fixed cost.....	<u>10.00</u>	<u>7.50</u>	<u>6.00</u>
Total cost per unit.....	<u>\$16.00</u>	<u>\$13.50</u>	<u>\$12.00</u>

2. The company's contribution format income statement is:

Sales (45,000 units × \$16 per unit).....	\$720,000
Variable expenses (45,000 units × \$6 per unit).....	<u>270,000</u>
Contribution margin	450,000
Fixed expense.....	<u>300,000</u>
Net operating income	<u>\$150,000</u>

Exercise 1-12 (10 minutes)

1. The computations for parts 1a through 1e are as follows:

a. The cost of batteries in Raw Materials:

Beginning raw materials inventory.....	0	
Plus: Battery purchases	<u>8,000</u>	
Batteries available	8,000	
Minus: Batteries withdrawn.....	<u>7,600</u>	
Ending raw materials inventory (a).....		400
Cost per battery (b)		\$80
Raw materials on April 30 th (a) × (b).....		\$32,000

b. The cost of batteries in Work in Process:

Beginning work in process inventory	0	
Plus: Batteries withdrawn for production ...	<u>7,500</u>	
Batteries available	7,500	
Minus: Batteries transferred to finished goods (7,500 × 90%)	6,750	
Ending work in process inventory (a).....		750
Cost per battery (b)		\$80
Work in process on April 30 th (a) × (b)		\$60,000

c. The cost of batteries in Finished Goods:

Beginning finished goods inventory	0	
Plus: Batteries transferred in from work in process (see requirement b)	<u>6,750</u>	
Batteries available	6,750	
Minus: Batteries transferred out to cost of goods sold (6,750 × (100% – 30%))	4,725	
Ending finished goods inventory (a)		2,025
Cost per battery (b)		\$80
Finished goods on April 30 th (a) × (b).....		\$162,000

Exercise 1-12 (continued)

d. The cost of batteries in Cost of Goods Sold:

Number of batteries (see requirement c)	
(a).....	4,725
Cost per battery (b)	\$80
Cost of goods sold for April (a) × (b).....	\$378,000

e. The cost of batteries included in selling expense:

Number of batteries (a).....	100
Cost per battery (b)	\$80
Selling expense for April (a) × (b).....	\$8,000

2. Raw Materials, Work in Process, and Finished Goods would appear on the balance sheet. Cost of Goods Sold and Selling Expense would appear on the income statement.

Exercise 1-13 (30 minutes)

1. True. The variable manufacturing cost per unit will remain the same within the relevant range.
2. False. The total fixed manufacturing cost will remain the same within the relevant range.
3. True. The total variable manufacturing cost will increase, so the total manufacturing cost will increase too.
4. True. The average fixed manufacturing cost per unit will decrease as the level of activity increases.
5. False. The total variable manufacturing cost will increase (rather than decrease) as the activity level increases.
6. False. The variable manufacturing cost per unit will remain the same, but the average fixed manufacturing cost per unit will decrease as the level of activity increases.
7. True. The variable manufacturing cost per unit of \$28 will stay constant within the relevant range. The \$28 figure is computed as follows:

Total manufacturing cost per unit (a)	\$70.00
Variable manufacturing cost percentage (b)	40%
Variable manufacturing cost per unit (a) × (b)	\$28.00

8. False. The total fixed manufacturing cost of \$420,000 does not change within the relevant range. The \$420,000 figure is computed as follows:

Total manufacturing cost per unit (a)	\$70.00
Variable manufacturing cost per unit (b) ...	28.00
Average fixed manufacturing cost per unit (a) – (b)	\$42.00
Number of units produced	× 10,000
Total fixed manufacturing cost	<u>\$420,000</u>

Exercise 1-13 (continued)

9. True. The underlying computations are as follows:

Variable manufacturing cost per unit (see requirement 7) (a)	\$28.00	
Number of units produced (b)	10,050	
Total variable manufacturing cost (a) × (b)		\$281,400
Total fixed manufacturing cost (see requirement 8)		<u>420,000</u>
Total manufacturing cost.....		<u>\$701,400</u>

10. True. The underlying computations are as follows:

Total fixed manufacturing cost (see requirement 8) (a)	\$420,000	
Number of units produced (b)	10,050	
Average fixed manufacturing cost per unit (a) ÷ (b) ..		\$41.79

11. False. The total variable manufacturing cost will equal \$281,400, computed as follows:

Variable manufacturing cost per unit (see requirement 7) (a)	\$28.00	
Number of units produced (b)	10,050	
Total variable manufacturing cost (a) × (b)		\$281,400

12. True. The underlying computations are as follows:

Variable manufacturing cost per unit (see requirement 7)	\$28.00	
Average fixed manufacturing cost per unit (see requirement 10).....		<u>41.79</u>
Total manufacturing cost per unit		<u>\$69.79</u>

Exercise 1-14 (30 minutes)

<i>Name of the Cost</i>	<i>Cost Classifications for:</i>			
	<i>(1) Predicting Cost behavior</i>	<i>(2) Manufacturers</i>	<i>(3) Preparing Financial Statements</i>	<i>(4) Decision Making</i>
Rental revenue forgone, \$30,000 per year	None	None	None	Opportunity cost
Direct materials cost, \$80 per unit..	Variable	Direct materials	Product	
Rental cost of warehouse, \$500 per month	Fixed	None	Period	
Rental cost of equipment, \$4,000 per month	Fixed	Manufacturing overhead	Product	
Direct labor cost, \$60 per unit.....	Variable	Direct labor	Product	
Depreciation of the annex space, \$8,000 per year	Fixed	Manufacturing overhead	Product	Sunk cost
Advertising cost, \$50,000 per year .	Fixed	None	Period	
Supervisor's salary, \$3,500 per month	Fixed	Manufacturing overhead	Product	
Electricity for machines, \$1.20 per unit.....	Variable	Manufacturing overhead	Product	
Shipping cost, \$9 per unit	Variable	None	Period	
Return earned on investments, \$3,000 per year	None	None	None	Opportunity cost

Exercise 1-15 (20 minutes)

1. Traditional income statement

The Alpine House, Inc.
Traditional Income Statement

Sales		\$150,000
Cost of goods sold		
(\$30,000 + \$100,000 – \$40,000)		<u>90,000</u>
Gross margin		60,000
Selling and administrative expenses:		
Selling expenses ((\$50 per unit × 200 pairs of skis*) + \$20,000)	\$30,000	
Administrative expenses ((\$10 per unit × 200 pairs of skis) + \$20,000)	<u>22,000</u>	<u>52,000</u>
Net operating income		<u>\$ 8,000</u>

*\$150,000 sales ÷ \$750 per pair of skis = 200 pairs of skis.

2. Contribution format income statement

The Alpine House, Inc.
Contribution Format Income Statement

Sales		\$150,000
Variable expenses:		
Cost of goods sold		
(\$30,000 + \$100,000 – \$40,000)	\$90,000	
Selling expenses		
(\$50 per unit × 200 pairs of skis)	10,000	
Administrative expenses		
(\$10 per unit × 200 pairs of skis)	<u>2,000</u>	<u>102,000</u>
Contribution margin		48,000
Fixed expenses:		
Selling expenses	20,000	
Administrative expenses	<u>20,000</u>	<u>40,000</u>
Net operating income		<u>\$ 8,000</u>

Exercise 1-15 (continued)

3. Since 200 pairs of skis were sold and the contribution margin totaled \$48,000 for the quarter, the contribution margin per unit was \$240 ($\$48,000 \div 200 \text{ pair of skis} = \$240 \text{ per pair of skis}$).

Exercise 1-16 (10 minutes)

1. The differential cost is computed as follows:

Cost of a new model 300 (a).....	\$313,000
Cost of a new model 200 (b).....	\$275,000
Differential cost (a) – (b)	\$38,000

2. The sunk cost is the cost of the machine purchased seven years ago for \$319,000.
3. The opportunity cost is the \$374,000 that could have been earned by pursuing the forgone option.

Exercise 1-17 (15 minutes)

<i>Cost Item</i>	<i>Cost Classifications for:</i>	
	<i>(1) Predicting Cost Behavior</i>	<i>(2) Preparing Financial Statements</i>
1. Hamburger buns at a Wendy's restaurant ...	Variable	Product
2. Advertising by a dental office.....	Fixed	Period
3. Apples processed and canned by Del Monte	Variable	Product
4. Shipping canned apples from a Del Monte plant to customers.....	Variable	Period
5. Insurance on a Bausch & Lomb factory producing contact lenses	Fixed	Product
6. Insurance on Nucor's corporate headquarters	Fixed	Period
7. Salary of a supervisor overseeing production of printers at Ricoh.....	Fixed	Product
8. Commissions paid to automobile salespersons.....	Variable	Period
9. Depreciation of factory lunchroom facilities at a General Electric plant	Fixed	Product
10. Steering wheels installed in Tesla electric vehicles.....	Variable	Product

Problem 1-18 (10 minutes)

1. The direct costs of the Apparel Department are as follows:

Apparel Department cost of sales—Evendale Store	\$ 90,000
Apparel Department sales commission—Evendale Store.....	7,000
Apparel Department manager's salary—Evendale Store.....	<u>8,000</u>
Total direct costs for the Apparel Department.....	<u>\$105,000</u>

2. The direct costs of the Evendale Store are as follows:

Apparel Department cost of sales—Evendale Store	\$ 90,000
Store manager's salary—Evendale Store	12,000
Apparel Department sales commission—Evendale Store.....	7,000
Store utilities—Evendale Store.....	11,000
Apparel Department manager's salary—Evendale Store.....	8,000
Janitorial costs—Evendale Store	<u>9,000</u>
Total direct costs for the Evendale Store	<u>\$137,000</u>

3. The direct costs in the Apparel Department that are also variable with respect to departmental sales is computed as follows:

Apparel Department cost of sales—Evendale Store	\$90,000
Apparel Department sales commission—Evendale Store.....	<u>7,000</u>
Total direct costs for the Apparel Department that are also variable costs	<u>\$97,000</u>

Problem 1-19 (30 minutes)

1. Contribution format income statement

Todrick Company
Contribution Format Income Statement

Sales		\$300,000
Variable expenses:		
Cost of goods sold		
(\$20,000 + \$200,000 – \$7,000)	\$213,000	
Selling expense.....	15,000	
Administrative expense	<u>12,000</u>	<u>240,000</u>
Contribution margin.....		60,000
Fixed expenses:		
Selling expense.....	30,000	
Administrative expense	<u>12,000</u>	<u>42,000</u>
Net operating income		<u>\$ 18,000</u>

The variable administrative expense shown above (\$12,000) is computed as follows:

Sales (a)	\$300,000	
Contribution margin (b)	\$60,000	
Total variable costs (a) – (b)		\$240,000
Total variable costs (a).....		\$240,000
Cost of goods sold.....	\$213,000	
Variable selling expense	<u>15,000</u>	
Cost of goods sold plus variable selling expense (b)		\$228,000
Variable administrative expense (a) – (b) ..		\$12,000

Problem 1-19 (continued)

The fixed selling expense shown above (\$30,000) is computed as follows:

Contribution margin (a)	\$60,000	
Net operating income (b)	\$18,000	
Total fixed costs (a) – (b)		\$42,000
Total fixed costs (a)		\$42,000
Fixed administrative expense (b)		\$12,000
Fixed selling expense (a) – (b)		\$30,000

2. Traditional income statement

Todrick Company Traditional Income Statement

Sales		\$300,000
Cost of goods sold		
(\$20,000 + \$200,000 – \$7,000)		<u>213,000</u>
Gross margin		87,000
Selling and administrative expenses:		
Selling expense		
(\$15,000 + \$30,000)	\$45,000	
Administrative expense		
(\$12,000 + \$12,000)	<u>24,000</u>	<u>69,000</u>
Net operating income		<u>\$ 18,000</u>

3. The selling price per unit is $\$300,000 \div 1,000 \text{ units sold} = \300 .
4. The variable cost per unit is $\$240,000 \div 1,000 \text{ units sold} = \240 .
5. The contribution margin per unit is $\$300 - \$240 = \$60$.
6. The contribution format is more useful because it organizes costs based on their cost behavior. The contribution format enables managers to quickly calculate how variable costs will change in response to changes in unit sales.

Problem 1-20 (20 minutes)

Item	Description	Direct or Indirect Cost of the Meals- On-Wheels Program		Direct or Indirect Cost of Particular Seniors Served by the Meals-On- Wheels Program		Variable or Fixed with Respect to the Number of Seniors Served by the Meals-On-Wheels Program	
		Direct	Indirect	Direct	Indirect	Variable	Fixed
a.	The cost of leasing the Meals-On-Wheels van	X			X		X
b.	The cost of incidental supplies such as salt, pepper, napkins, and so on.....	X			X*	X	
c.	The cost of gasoline consumed by the Meals-On- Wheels van.....	X			X	X	
d.	The rent on the facility that houses Madison Seniors Care Center, including the Meals-On- Wheels program.....		X		X		X
e.	The salary of the part-time manager of the Meals-On-Wheels program.....	X			X		X
f.	Depreciation on the kitchen equipment used in the Meals-On-Wheels program	X			X		X
g.	The hourly wages of the caregiver who drives the van and delivers the meals.....	X			X*	X	
h.	The costs of complying with health safety regulations in the kitchen.....	X			X		X
i.	The costs of mailing letters soliciting donations to the Meals-On-Wheels program	X			X		X

*These costs could be direct costs of serving particular seniors.

Problem 1-21 (45 minutes)

1. Marwick's Pianos, Inc.
Traditional Income Statement
For the Month of August

Sales (40 pianos × \$3,125 per piano).....	\$125,000
Cost of goods sold	
(40 pianos × \$2,450 per piano).....	<u>98,000</u>
Gross margin	27,000
Selling and administrative expenses:	
Selling expenses:	
Advertising	\$ 700
Sales salaries and commissions	
[\$950 + (8% × \$125,000)].....	10,950
Delivery of pianos	
(40 pianos × \$30 per piano)	1,200
Utilities.....	350
Depreciation of sales facilities	<u>800</u>
Total selling expenses	<u>14,000</u>
Administrative expenses:	
Executive salaries.....	2,500
Insurance	400
Clerical	
[\$1,000 + (40 pianos × \$20 per piano)] ...	1,800
Depreciation of office equipment.....	<u>300</u>
Total administrative expenses.....	<u>5,000</u>
Total selling and administrative expenses.....	<u>19,000</u>
Net operating income	<u>\$ 8,000</u>

Problem 1-21 (continued)

2. Marwick's Pianos, Inc.
Contribution Format Income Statement
For the Month of August

	<i>Total</i>	<i>Per Piano</i>
Sales (40 pianos × \$3,125 per piano).....	<u>\$125,000</u>	<u>\$3,125</u>
Variable expenses:		
Cost of goods sold		
(40 pianos × \$2,450 per piano)	98,000	2,450
Sales commissions (8% × \$125,000)	10,000	250
Delivery of pianos (40 pianos × \$30 per piano)	1,200	30
Clerical (40 pianos × \$20 per piano)	<u>800</u>	<u>20</u>
Total variable expenses.....	<u>110,000</u>	<u>2,750</u>
Contribution margin	<u>15,000</u>	<u>\$ 375</u>
Fixed expenses:		
Advertising	700	
Sales salaries	950	
Utilities	350	
Depreciation of sales facilities.....	800	
Executive salaries	2,500	
Insurance.....	400	
Clerical.....	1,000	
Depreciation of office equipment	<u>300</u>	
Total fixed expenses	<u>7,000</u>	
Net operating income	<u>\$ 8,000</u>	

3. Fixed costs remain constant in total but vary on a per unit basis inversely with changes in the activity level. As the activity level increases, for example, the fixed costs will decrease on a per unit basis. Showing fixed costs on a per unit basis on the income statement might mislead management into thinking that the fixed costs behave in the same way as the variable costs. That is, management might be misled into thinking that the per unit fixed costs would be the same regardless of how many pianos were sold during the month. For this reason, fixed costs generally are shown only in totals on a contribution format income statement.

Problem 1-22 (45 minutes)

1. The total manufacturing overhead cost is computed as follows:

Direct labor cost (a).....	\$15,000
Direct labor as a percentage of total conversion costs (b).....	30%
Total conversion cost (a) ÷ (b)	\$50,000
 Total conversion cost (a)	 \$50,000
Direct labor cost (b).....	\$15,000
Total manufacturing overhead cost (a) – (b)	\$35,000

2. The total direct materials cost is computed as follows:

Direct labor cost (a).....	\$15,000
Direct labor as a percentage of total prime costs (b).....	40%
Total prime cost (a) ÷ (b)	\$37,500
 Total prime cost (a).....	 \$37,500
Direct labor cost (b).....	\$15,000
Total direct materials cost (a) – (b).....	\$22,500

3. The total amount of manufacturing cost is computed as follows:

Direct materials cost.....	\$22,500
Direct labor cost.....	15,000
Manufacturing overhead cost	<u>35,000</u>
Total manufacturing cost.....	<u>\$72,500</u>

4. The total variable selling and administrative cost is computed as follows:

Total sales (a)	\$120,000
Sales commission percentage (b)	5%
Total variable selling and administrative cost (a) × (b).....	\$6,000

Problem 1-22 (continued)

5. The total variable cost is computed as follows:

Direct materials cost	\$22,500
Direct labor cost	15,000
Sales commissions	<u>6,000</u>
Total variable cost	<u>\$43,500</u>

6. The total fixed cost is computed as follows:

Total selling and administrative expenses	
(a)	\$18,000
Sales commissions (b)	\$6,000
Total fixed selling and administrative	
expense (a) – (b)	\$12,000
Total fixed manufacturing overhead	<u>35,000</u>
Total fixed cost	<u>\$47,000</u>

7. The total contribution margin is calculated as follows:

Sales (a)	\$120,000
Variable costs (b)	\$43,500
Contribution margin (a) – (b)	\$76,500

Problem 1-23 (30 minutes)

Note to the Instructor: There may be some exceptions to the answers below. The purpose of this problem is to get the student to start *thinking* about cost behavior and cost purposes; try to avoid lengthy discussions about how a particular cost is classified.

<i>Cost Item</i>	<i>Variable or Fixed</i>	<i>Selling Cost</i>	<i>Administrative Cost</i>	<i>Manufacturing (Product) Cost</i>	
				<i>Direct</i>	<i>Indirect</i>
1. Property taxes, factory	F				X
2. Boxes used for packaging detergent produced by the company.....	V			X	
3. Salespersons' commissions	V	X			
4. Supervisor's salary, factory	F				X
5. Depreciation, executive autos	F		X		
6. Wages of workers assembling computers	V			X	
7. Insurance, finished goods warehouses	F	X			
8. Lubricants for production equipment	V				X
9. Advertising costs.....	F	X			
10. Microchips used in producing calculators	V			X	
11. Shipping costs on merchandise sold	V	X			
12. Magazine subscriptions, factory lunchroom...	F				X
13. Thread in a garment factory	V				X
14. Executive life insurance	F		X		

Problem 1-23 (continued)

<i>Cost Item</i>	<i>Variable or Fixed</i>	<i>Selling Cost</i>	<i>Administrative Cost</i>	<i>Manufacturing (Product) Cost</i>	
				<i>Direct</i>	<i>Indirect</i>
15. Ink used in textbook production.....	V				X
16. Fringe benefits, materials handling workers ..	V				X
17. Yarn used in sweater production.....	V			X	
18. Wages of receptionist, executive offices	F		X		

Problem 1-24 (30 minutes)

1a. The total product cost is computed as follows:

Direct materials	\$ 69,000
Direct labor	35,000
Total manufacturing overhead	<u>43,000</u>
Total product cost.....	<u>\$147,000</u>

1b. The total period cost is computed as follows:

Total selling expense	\$30,000
Total administrative expense	<u>29,000</u>
Total period cost.....	<u>\$59,000</u>

2a. The total direct manufacturing cost is computed as follows:

Direct materials	\$ 69,000
Direct labor	<u>35,000</u>
Total direct manufacturing cost	<u>\$104,000</u>

2b. The total indirect manufacturing cost is computed as follows:

Variable manufacturing overhead	\$15,000
Fixed manufacturing overhead	<u>28,000</u>
Total indirect manufacturing cost.....	<u>\$43,000</u>

3a. The total manufacturing cost is computed as follows:

Direct materials	\$ 69,000
Direct labor	35,000
Total manufacturing overhead	<u>43,000</u>
Total manufacturing cost.....	<u>\$147,000</u>

Problem 1-24 (continued)

3b. The total nonmanufacturing cost is computed as follows:

Total selling expense	\$30,000
Total administrative expense	<u>29,000</u>
Total nonmanufacturing cost	<u>\$59,000</u>

3c. The total conversion cost is computed as follows:

Direct labor	\$35,000
Total manufacturing overhead	<u>43,000</u>
Total conversion cost	<u>\$78,000</u>

The total prime cost is computed as follows:

Direct materials	\$ 69,000
Direct labor	<u>35,000</u>
Total prime cost	<u>\$104,000</u>

4a. The total variable manufacturing cost is computed as follows:

Direct materials	\$ 69,000
Direct labor	35,000
Variable manufacturing overhead	<u>15,000</u>
Total variable manufacturing cost	<u>\$119,000</u>

4b. The total amount of fixed cost for the company as a whole is computed as follows:

Fixed manufacturing overhead	\$28,000
Fixed selling expense	18,000
Fixed administrative expense	<u>25,000</u>
Total fixed cost	<u>\$71,000</u>

Problem 1-24 (continued)

4c. The variable cost per unit produced and sold is computed as follows:

Direct materials	\$ 69,000
Direct labor	35,000
Total variable manufacturing overhead.....	15,000
Variable selling expense	12,000
Variable administrative expense.....	<u>4,000</u>
Total variable cost (a)	<u>\$135,000</u>
Number of units produced and sold (b).....	1,000
Variable cost per unit produced and sold (a) ÷ (b)	\$135

5a. The incremental manufacturing cost is computed as follows:

Direct materials	\$ 69,000
Direct labor	35,000
Variable manufacturing overhead	<u>15,000</u>
Total incremental cost (a)	<u>\$119,000</u>
Number of units produced and sold (b).....	1,000
Incremental cost per unit produced (a) ÷ (b)	\$119

Problem 1-25 (30 minutes)

1.

Milden Company
Contribution Format Income Statement
For the Next Quarter

Sales (12,000 units × \$100 per unit)		\$1,200,000
Variable expenses:		
Cost of goods sold		
(12,000 units × \$35 unit)	\$420,000	
Sales commission (6% × \$1,200,000).....	72,000	
Shipping expense		
(12,000 units × \$9.10 per unit)	<u>109,200</u>	
Total variable expenses.....		<u>601,200</u>
Contribution margin		598,800
Fixed expenses:		
Advertising expense.....	210,000	
Shipping expense	28,000	
Administrative salaries	145,000	
Insurance expense	9,000	
Depreciation expense.....	<u>76,000</u>	
Total fixed expenses		<u>468,000</u>
Net operating income		<u>\$ 130,800</u>

Problem 1-25 (continued)

2. Milden Company
Traditional Format Income Statement
For the Next Quarter

Sales (12,000 units × \$100 per unit)		\$1,200,000
Cost of goods sold		
(12,000 units × \$35 per unit)		<u>420,000</u>
Gross margin		780,000
Selling and administrative expenses:		
Advertising	\$210,000	
Sales commissions		
(6% × \$1,200,000)	72,000	
Shipping expense		
[\$28,000 + (12,000 units × \$9.10 per		
unit)]	137,200	
Administrative salaries	145,000	
Insurance expense	9,000	
Depreciation expense	<u>76,000</u>	
Total selling and administrative expenses		<u>649,200</u>
Net operating income		<u>\$ 130,800</u>

Case 1-26 (45 minutes)

1.

<i>Cost Item</i>	<i>Cost Behavior</i>		<i>Selling or Administrative Cost</i>	<i>Product Cost</i>	
	<i>Variable</i>	<i>Fixed</i>		<i>Direct</i>	<i>Indirect</i>
Direct labor.....	\$118,000			\$118,000	
Advertising.....		\$50,000	\$50,000		
Factory supervision		40,000			\$40,000
Property taxes, factory building...		3,500			3,500
Sales commissions.....	80,000		80,000		
Insurance, factory		2,500			2,500
Depreciation, administrative office equipment.....		4,000	4,000		
Lease cost, factory equipment.....		12,000			12,000
Indirect materials, factory.....	6,000				6,000
Depreciation, factory building.....		10,000			10,000
Administrative office supplies	3,000		3,000		
Administrative office salaries.....		60,000	60,000		
Direct materials used.....	94,000			94,000	
Utilities, factory	20,000				20,000
Total costs.....	<u>\$321,000</u>	<u>\$182,000</u>	<u>\$197,000</u>	<u>\$212,000</u>	<u>\$94,000</u>

Case 1-26 (continued)

2. The average product cost for one patio set would be:

Direct	\$212,000
Indirect	<u>94,000</u>
Total	<u>\$306,000</u>

$\$306,000 \div 2,000 \text{ sets} = \153 per set

3. The average product cost per set would increase if the production drops. This is because the fixed costs would be spread over fewer units, causing the average cost per unit to rise.
4. a. Yes, the president may expect a minimum price of \$153, which is the average cost to manufacture one set. He might expect a price even higher than this to cover a portion of the administrative costs as well. The brother-in-law probably is thinking of cost as including only direct materials, or, at most, direct materials and direct labor. Direct materials alone would be only \$47 per set ($\$94,000 \div 2,000 = \47 per set), and direct materials and direct labor would be only \$106 per set ($(\$94,000 + \$118,000) \div 2,000 = \106 per set).
- b. The term is opportunity cost. The full, regular price of a set might be appropriate here, because the company is operating at full capacity, and this is the amount that must be given up (benefit forgone) to sell a set to the brother-in-law.

Case 1-27 (30 minutes)

1. A cost that is classified as a period cost will be recognized on the income statement as an expense in the current period. A cost that is classified as a product cost will be recognized on the income statement as an expense (i.e., cost of goods sold) only when the associated units of product are sold. If some units are unsold at the end of the period, the costs of those unsold units are treated as assets. Therefore, by reclassifying period costs as product costs, the company is able to carry some costs forward in inventories that would have been treated as current expenses.
2. The discussion below is divided into two parts—Gallant's actions to postpone expenditures and the actions to reclassify period costs as product costs.

The decision to postpone expenditures is questionable. It is one thing to postpone expenditures due to a cash bind; it is quite another to postpone expenditures in order to hit a profit target. Postponing these expenditures may have the effect of ultimately increasing future costs and reducing future profits. If orders to the company's suppliers are changed, it may disrupt the suppliers' operations. The additional costs may be passed on to Gallant's company and may create ill will and a feeling of mistrust. Postponing maintenance on equipment is particularly questionable. The result may be breakdowns, inefficient and/or unsafe operations, and a shortened life for the machinery.

Gallant's decision to reclassify period costs is not ethical—assuming that there is no intention of disclosing in the financial reports this reclassification. Such a reclassification would be a violation of the principle of consistency in financial reporting and is a clear attempt to mislead readers of the financial reports. Although some may argue that the overall effect of Gallant's action will be a "wash"—that is, profits gained in this period will simply be taken from the next period—the trend of earnings will be affected. Hopefully, the auditors would discover any such attempt to manipulate annual earnings and would refuse to issue an unqualified opinion due to the lack of consistency. However, recent accounting scandals may lead to some skepticism about how forceful auditors have been in enforcing tight accounting standards.

Chapter 1 Lecture Notes

- 1 { **Chapter theme:** This chapter explains how managers need to rely on different cost classifications for different purposes. The main purposes emphasized in this chapter include **assigning costs to cost objects, accounting for costs in manufacturing companies, preparing financial statements, predicting cost behavior in response to changes in activity, and decision making.**

I. Cost classifications for assigning costs to cost objects

- 2 { A. Needs of management:
- i. **Financial accounting** – concerned with reporting financial information to external parties, such as stockholders, creditors, and regulators.
 - ii. **Managerial accounting** – concerned with providing information to managers within an organization so that they can formulate plans, control operations, and make decisions.
- 3 { B. This slide summarizes the types of cost classifications that will be discussed in this chapter, namely cost classifications for **assigning costs to cost objects, manufacturing companies, preparing financial statements, predicting cost behavior, and making business decisions.**
- 4 { *Learning Objective 1: Understand cost classifications used for assigning costs to cost objects: direct costs and indirect costs.*

- 5 { C. **Cost object** – Anything for which cost data are desired including products, customers, jobs, organizational subunits, etc. For purposes of assigning costs to cost objects costs are classified two ways:
- i. **Direct costs** – Costs that can be easily and conveniently traced to a specified cost object.
- ii. **Indirect costs** – Costs that cannot be easily and conveniently traced to a specified cost object.
1. **Common costs** – Indirect costs incurred to support a number of cost objects. These costs cannot be traced to any individual cost object.

II. **Cost classifications for manufacturing companies**
Manufacturing companies separate their costs into two broad categories—manufacturing and nonmanufacturing costs.

6 { *Learning Objective 2: Identify and give examples of each of the three basic manufacturing cost categories.*

7 { A. **Classifications of manufacturing costs**

8 { i. **Direct materials** – Raw materials that become an integral part of the finished product and whose costs can be conveniently traced to it.

- 9 { ii. **Direct labor** – Labor costs that can be easily traced to individual units of product (sometimes called touch labor).
- 10 { iii. **Manufacturing overhead** – Includes all manufacturing costs except direct materials and direct labor. These costs cannot be readily traced to finished products (also called indirect manufacturing cost, factory overhead, and factory burden).
- 11 { 1. Includes **indirect materials** that cannot be easily or conveniently traced to specific units of product.
2. Includes **indirect labor costs** that cannot be easily or conveniently traced to specific units of product.
3. Other examples of manufacturing overhead include: depreciation of manufacturing equipment, utility costs, property taxes, and insurance premiums incurred to operate a manufacturing facility.
- 12 { iv. **Prime costs and conversion costs**
1. **Prime cost** – Direct materials cost plus direct labor cost.
2. **Conversion cost** – Direct labor cost plus manufacturing overhead costs.

- 13 { **B. Classifications of nonmanufacturing costs** (also called selling and administrative costs).
- i. **Selling costs** – Includes all costs necessary to secure customer orders and get the finished product into the hands of the customer. Selling costs can be either direct or indirect costs.
 - ii. **Administrative costs** – Includes all costs associated with the general management of an organization. Administrative costs can be either direct or indirect costs.

- 14 { *Learning Objective 3: Understand cost classifications used to prepare financial statements: product costs and period costs.*

C. Cost classifications for preparing financial statements

- 15 { i. **Product costs** – Includes all the costs that are involved in acquiring or making a product. Product costs “attach” to a unit of product as it is purchased or manufactured and they stay attached to each unit of product as long as it remains in inventory awaiting sale.
- 16 { 1. For manufacturing companies, product costs include:
 - a. **Raw materials** – Includes any materials that go into the final product.

- | | | |
|-------|---|---|
| 16 | { | <p>b. Work in process – Consists of units of product that are only partially complete and will require further work before they are ready for sale to the customer.</p> <p>c. Finished goods– Consists of completed units of product that have not yet been sold to customers.</p> |
| 17 | { | <p>d. Transfer of product costs:</p> <ol style="list-style-type: none"> 1. When direct materials are used in production, their costs are transferred from Raw Materials to Work in Process. 2. Direct labor and manufacturing overhead costs are added to Work in Process to convert direct materials into finished goods. 3. Once units of product are completed, their costs are transferred from Work in Process to Finished Goods. 4. When a manufacturer sells its finished goods to customers, the costs are transferred from Finished Goods to Cost of Goods Sold. |
| 18 | { | <p>ii. Period costs – Includes all selling and administrative costs.</p> <ol style="list-style-type: none"> 1. These costs are expensed in the income statement in the period incurred. |
| 19-20 | { | <p><i>Quick Check – product versus period costs</i></p> |

III. Cost classifications for predicting cost behavior

- 21 { *Learning Objective 4: Understand cost classifications used to predict cost behavior: variable costs, fixed costs, and mixed costs.*
- 22 { A. **Cost behavior** refers to how a cost will react to changes in the level of activity. The most commonly used classifications of cost behavior are variable, fixed, and mixed costs:
- 23 { i. **Variable cost** – A cost that varies, in total, in direct proportion to changes in the level of activity. However, variable cost per unit is constant.
- 24 { 1. An **activity base** (also called a cost driver) is a measure of what causes the incurrence of variable costs. As the level of the activity base increases, the total variable cost increases proportionally.
- 25 { ii. **Fixed cost** – A cost that remains constant, in total, regardless of changes in the level of the activity. However, if expressed on a per unit basis, the average fixed cost per unit varies inversely with changes in activity.
- 26 { 1. **Committed fixed costs** represent investments with a multi-year planning horizon that cannot be easily adjusted in the short term.
2. **Discretionary fixed costs** usually arise from annual decisions by management and they can be easily reduced in the short term.

Helpful Hint: To illustrate fixed costs, ask students for the cost of a large pizza. Then ask: What would be the cost per student if two students buy a pizza? What if four students buy a pizza? This makes it clear why average fixed costs change on a per unit basis. To illustrate variable costs, add that a beverage costs \$1 and each student eating the pizza has one beverage. So, if two people were eating the pizza, the total beverage bill would come to \$2; if four people, \$4. The cost per beverage remains the same, but the total cost depends on the number of people ordering a beverage.

- 27 {
- iii. **The linearity assumption and the relevant range** – Accountants usually assume that costs are strictly linear; however, economists point out that many costs are actually curvilinear. Nonetheless, within a narrow band of activity known as the relevant range, a curvilinear cost can be **satisfactorily approximated** by a straight line.
1. The **relevant range** is that range of activity within which the assumptions made about cost behavior are valid.
- 28 {
- iv. The relevant range of activity **pertains to fixed cost as well as variable costs.**
1. For example, assume office space is available at a rental rate of \$30,000 per year in increments of 1,000 square feet.
2. Fixed costs would increase in a step fashion at a rate of \$30,000 for each additional 1,000 square feet.

29 { v. The relevant range for a fixed cost is the range of activity over which the graph of the cost is flat.

30 { vi. It is helpful to think about variable and fixed cost behavior in a **2x2 matrix**.

31-32 { *Quick Check – variable vs. fixed costs*

v. **Mixed cost** – A cost that contains both variable and fixed elements.

1. For example, utility bills often contain fixed and variable cost components.

a. The fixed portion of the utility bill is constant regardless of kilowatt hours consumed. This cost represents the minimum cost that is incurred to have the service ready and available for use.

b. The variable portion of the bill varies in direct proportion to the consumption of kilowatt hours.

vi. An equation can be used to express the relationship between mixed costs and the level of the activity. This equation can be used to calculate what the total mixed cost would be for any level of activity.

1. The equation is $Y = a + bX$

a. Y = The total mixed cost.

b. a = The total fixed cost (the vertical intercept of the line).

c. b = The variable cost per unit of activity (the slope of the line).

- 34 { d. X = The level of activity.
- 35 { vii. For example, if your fixed monthly utility charge is **\$40**, your variable cost is **\$0.03 per kilowatt hour**, and your monthly activity level was **2,000 kilowatt hours**, this equation can be used to calculate your total utility cost of **\$100**.

IV. Cost classifications for decision making

36 { *Learning Objective 5: Understand cost classifications used in making decisions: relevant costs and irrelevant costs. ~~differential costs, sunk costs, and opportunity costs.~~*

37 { A. Decisions involve choosing between alternatives. The goal of making decisions is to identify those costs that are either **relevant** or **irrelevant** to the decision. To make decisions, it is essential to have a grasp on three concepts:

38 { i. **Differential costs** (or **incremental costs**) – A difference in cost between any two alternatives; a difference in revenue between two alternatives is called **differential revenue**. Both are always relevant to decisions.

1. Differential costs can be either fixed or variable.

39

- ii. **OpportunitySunk cost** – The potential benefit that is given up when one alternative is selected over another. A cost that has already been incurred and that cannot be changed now or in the future.

Helpful Hint: Ask students: “Suppose you had purchased gold for \$400 an ounce, but now it is selling for \$250 an ounce. Should you wait for the gold to reach \$400 an ounce before selling it?” Many students will say “yes” even though the \$400 purchase is a sunk cost.

40

- iii. **SunkOpportunity cost** – The potential benefit that is given up when one alternative is selected over another. A cost that has already been incurred and that cannot be changed now or in the future.

1. These costs are not usually found in accounting records but must be explicitly considered in every decision.

Helpful Hint: Ask students what opportunity costs they incur by attending class. Their opportunity cost is the value to them of the activity they would be doing otherwise (e.g., working, sleeping, partying, studying, etc.)

41-46

Quick Check – relevant costs

III. Traditional and contribution format income statements

47

Learning Objective 6: Prepare income statements for a merchandising company using the traditional and contribution formats.

- 48 { A. The traditional and contribution formats differ as follows:
- i. The traditional approach separates product costs as required for external reporting purposes from selling and administrative expenses. It does not focus on cost behavior.
 - ii. The contribution approach separates costs into fixed and variable categories. Sales – variable costs = contribution margin. The contribution margin – fixed costs = net operating income.
- 49 {
- iii. The contribution approach is used as an internal planning and decision-making tool. For example, this approach is useful for:
 1. Cost-volume-profit analysis (Chapter 5).
 2. Segmented reporting of profit data (Chapter 6).
 3. Budgeting (Chapter 8).
 4. Special decisions such as pricing and make or buy analysis (Chapter 132).

Helpful Hint: The income statement from the annual report of a well-known local manufacturing firm can be used to illustrate the functional income statement. Ask if the various expense categories on the income statement contain both fixed and variable costs. Also ask how to estimate the increase in profit that would result from a 4% increase in sales using the functional statement. There is no way to do this with reasonable accuracy, since there is no way to tell on a functional income statement what costs would increase.
